### Maximize your business and machine performance with MachineStruxure

Machine builders like you are constantly looking for new ways to design and build more innovative machines in less time and at lower cost. MachineStruxure™ can help.

The NEXT generation of MachineStruxure is a complete machine automation solution that provides flexible and scalable machine control, ready-to-use architectures, efficient engineering solutions, and comprehensive customization and engineering support services. It can help you meet your challenges for improved efficiency and greater productivity, as well as allow you to deliver higher added value to your customers throughout the entire machine life cycle.

### Ready-to-use architectures and function blocks

Tested, Validated, and Documented Architectures (TVDAs) are just one of the ways we help you reduce design time.

Whether your machines are simple or complex, Application Function Blocks (AFBs) make system design fast and easy.

# Modicon M221 and M221 Book logic controllers

**Fastest and smallest logic controllers on the market**

## Flexible and scalable machine control

With the new range of Modicon™ logic controllers, the next generation of MachineStruxure provides flexible and scalable machine control. Ethernet connectivity, USB port for programming, and an embedded web server: it's all included.

**Best-in-class performance**

From logic to motion control, the Modicon range offers flexibility and scalability to suit your needs ➤

**Modicon M221: the small yet powerful logic controller for hardwired solutions**

## Everything you need is embedded

The Modicon M221 offers best-in-class performance. Available also in book format, the Modicon M221 requires minimal installation and offers tremendous versatility.

**Modicon M221 Book and a broad choice of I/O extension modules**

- > SD card, Run/Stop switch, USB port, 2 analog inputs, serial line, Ethernet and serial line, cartridge extension (on standard version): it's all embedded.
- > Thanks to its high degree of flexibility, it's very easy to add additional modules (safety modules, Tesys motor starter module, extensive line of analog and digital modules, ...) - and still keep everything in just one configuration

# Modicon M221 and M221 Book logic controllers

## Modicon M221: the small yet powerful logic controller for hardwired solutions

SoMachine simplifies every step in the design and commissioning of your machines

### Intuitive machine programming with SoMachine

SoMachine® is the universal programming software for machines automated by MachineStruxure controllers. Simple navigation that requires only fewer clicks delivers a more efficient engineering process.

- > In order to reduce complexity we offer SoMachine Basic, a simplified engineering tool for the new controller Modicon M221.
- > All programming, visualization, and commissioning are handled in just one intuitive tool that is available as a free download.
- > No training required

Programming

Configuration

Commissioning

### Connected everywhere

For simplified maintenance, commissioning, and uploads/downloads, simply use your smartphone or tablet and connect anytime, anywhere.

- > Application for mobile phone & smartphone
- > Bluetooth® communication

### Customization and services

Our experts help you every step of the way, from perfecting machine design to on-site services of the finished machine. Global support, 24/7 hotline services, and replacement parts centers around the world enable you to deliver superior customer support and satisfaction.

Achieve benchmark performance  
while increasing profitability

Make the most of your energy<sup>SM</sup>

### Presentation

#### Applications

Modicon **M221** and **M221 Book** logic controllers are designed for simple machines. They can optimize the size of wall-mounted and floor-standing control system enclosures due to their compact dimensions.

- The controllers are available in 2 formats:
  - Modicon **M221** controllers (references TM221C•••) offer excellent connection capacity and customization options without increasing the controller size, using I/O, communication or application cartridges.
  - Modicon **M221 Book** controllers (references TM221M•••) offer very small dimensions and a wide choice of connections.
- M221 and M221 Book controllers have an embedded Ethernet port meaning they can easily be integrated in control system architectures, for remote control and maintenance of machines using applications for smartphones, tablets and PCs.
- The wealth of functions embedded in M221 and M221 Book controllers minimizes the cost of the machine:
  - Functions embedded in the controller: Modbus serial link, USB port dedicated to programming and simple position control functions (high-speed counters and pulse train outputs with trapezoidal profile and S curve).
  - Functions embedded in Modicon TM3 extensions: functional safety modules, motor-starter control module and remote expansion system.
  - Functions embedded in the dedicated display unit.
- The application is created quickly thanks to the intuitive nature of the SoMachine Basic programming software, which also has embedded configuration of the display unit and extensions, including the functional safety modules. This software environment makes it easy to retrieve Twido range applications, maximizing use of the investment already made. Applications can thus easily be ported to any of the Modicon logic controllers: M241, M251 and M258.

### Main functions

#### Modicon TM221C•••

w x h x d (mm/in.)

- 16 I/O: 95 x 90 x 70 / 3.74 x 3.54 x 2.75
- 24 I/O: 110 x 90 x 70 / 4.33 x 3.54 x 2.75
- 40 I/O: 163 x 90 x 70 / 6.41 x 3.54 x 2.75

#### Supply voltage

24 V  $\perp\!\!\!\perp$  or 100..240 V  $\sim$  50/60 Hz

#### Modicon TM221M•••

w x h x d (mm/in.)

- 16 I/O: 70 x 90 x 70 / 2.75 x 3.54 x 2.75
- 32 I/O: 70 x 90 x 70 / 2.75 x 3.54 x 2.75

24 V  $\perp\!\!\!\perp$

#### Connection of the embedded I/O

On removable screw terminal blocks at intervals of 5.08 mm (0.20 in.)  
24 V/0.25 A power supply provided by the controller  
for sensor inputs on TM221C••R models

16 I/O: On removable screw or spring terminal blocks at intervals of 3.81 mm (0.15 in.)  
32 I/O: On HE10 connectors with HE 10 cables/bare wires or Telefast ABE7 connection sub-bases (1)

#### Analog inputs

2 embedded inputs on each TM221M••• and TM221C••• controller

#### Embedded Ethernet communication

Yes on TM221CE••

Yes on TM221ME••

#### Serial link

1 embedded link

1 to 2 embedded links

#### Cartridges

One slot for 1 or 2 cartridges depending on the controller model:

- I/O cartridge (analog inputs or outputs, temperature inputs)
- communication cartridge (serial link) or application cartridges (hoisting, conveying and packaging)

–

#### Hardware characteristics

M221 and M221 Book controllers each have an embedded:

- Run/Stop switch
- slot for an industrial SD memory card
- QR code for direct access to its technical documentation

(1) Telefast Modicon ABE7 pre-wired system to be ordered separately. Please consult our catalog "Telefast pre-wiring system: Modicon ABE7 and Modicon ABE9" or on our website [www.schneider-electric.com](http://www.schneider-electric.com).

# Modicon M221 and M221 Book logic controllers

General presentation, options for Modicon M221 and M221 Book logic controllers

## Presentation

### Embedded communication (see page 15)

M221 and M221 Book logic controllers have three types of integrated communication port:

- Ethernet
- RS 232/RS 485 serial link
- USB mini-B programming port

### Embedded functions

Each Modicon M221 and M221 Book logic controller has the following integrated functions:

- Analog (PID control)
- Counting: Up to 4 high-speed counters (HSC), 100 kHz frequency
- Controllers with transistor logic outputs (source or sink) are equipped with 2 or 4 high-speed counters (1) supporting pulse generation functions.
- Position control (PTO), with trapezoidal profile and S curve able to control either:
  - 2 or 4 axes in pulse direction (P/D) mode
  - 1 or 2 axes in CW/CCW mode
 These outputs can be associated with event-triggered inputs to feed back homing and capture information. A "Motiontask" function block (one per axis) associated with a command table can be used to program and preview intuitively all the movements of an axis in the SoMachine Basic software.
- Pulse width modulation (PWM)
- Pulse generator (PLS)
- Frequency generator (FREQGEN)

SoMachine Basic software

### Processing power

- Execution speed: 0.2 µs/Boolean instruction
- Program: 10 Boolean Kinstructions
- Number of words: 8,000. Number of internal bits: 1,024
- RAM: 640 K (256 K for internal variables and 256 K for application and client data)
- Flash memory: 2 MB (including 256 K for backing up the client application and data in the event of a power outage)

### Programming

M221 and M221 Book logic controllers are programmed with the SoMachine Basic software. Please consult our website: [www.schneider-electric.com](http://www.schneider-electric.com). SoMachine Basic is an integral component of the SoMachine software. SoMachine Basic is available on CD and also as a download from our website: [www.schneider-electric.com](http://www.schneider-electric.com).

## Options

### Memory card

The TMASD1 industrial SD memory card, with 256 MB capacity, is available for Modicon M221 and M221 Book logic controllers. It is used for:

- backing up and transferring applications
- loading firmware
- duplicating applications between controllers

### Cartridges

One or two cartridges can be inserted on the front of TM221C●● controllers without increasing the dimensions.

Three types of cartridge are offered:

- Analog I/O cartridges
    - TMC2AI2 for 2 analog inputs which can be configured as voltage or current
    - TMC2AQ2V for 2 voltage analog outputs
    - TMC2AQ2C for 2 current analog outputs
    - TMC2TI2 for 2 temperature inputs
  - Communication cartridge
    - TMC2SL1 providing additional serial link port terminals for connection via a printer, barcode reader, etc.
  - Application cartridges
    - TMC2HOIS01 for hoisting applications with two dedicated analog inputs for controlling a load cell
    - TMC2PACK01 for packaging applications with two dedicated analog inputs for controlling the temperature on a packaging machine
    - TMC2CONV01 for conveyor system applications with a serial link.
- Using an application cartridge provides direct access to application examples via the SoMachine Basic software

(1) 4 high-speed outputs on TM221C●40U, 2 high-speed outputs on TM221●●16T, TM221C●24T, TM221C●40T, TM221C●16U, TM221C●24U.

# Modicon M221 and M221 Book logic controllers

Remote graphic display unit for Modicon M221 and M221 Book logic controllers

*TMH2GDB remote graphic display unit*

*M221*

*M221 Book*

## TMH2GDB remote graphic display unit

### Presentation

The **TMH2GDB** remote graphic display unit is an HMI dedicated to M221 and M221 Book logic controllers. It is mounted on the front panel of a wall-mounted or floor-standing enclosure (degree of protection IP 65) or, using mounting brackets, at the back of an enclosure on a panel or symmetrical rail.

The **TMH2GDB** display unit is ready to use: the main application parameters can be accessed, with no prior programming, as soon as it is connected to the logic controller. Customized dialog pages can however easily be created using predefined templates in the SoMachine Basic software dedicated to Modicon M221 and M221 Book logic controllers.

The **TMH2GDB** remote graphic display unit is a multifunction display unit which runs alongside your machine throughout its life cycle:

- During debugging: reading the states and values of variables and providing complete diagnostics of the controller configuration
- During installation: options for setting the time and configuring the communication ports
- During runtime: an operator interface created in the SoMachine Basic software can be used to (for example):
  - display information in the form of text, values, bargraphs or gauges
  - perform machine control actions
  - enter or modify data
  - customize buttons on the front panel
- During maintenance: the page displaying alarm messages is permanently accessible by pressing a single key. Alarm messages are stored and time-tagged in a page of the log. An icon, which is always visible, flags up the presence of at least one alarm message. Access to each page and modification of its values can be protected by a password.

### Main characteristics

- Backlit monochrome STN LCD 60 x 40 mm (2.36 x 1.57 in.)
- 5 lines of 20 to 35 characters, depending on the type of page
- Title block at the top of the page
- Title block at the bottom of the page
- 8 languages available: English, French, German, Italian, Spanish, Portuguese, Chinese and Turkish
- Up to 4 customizable service keys
- 100 HMI pages maximum
- Dimensions on the front panel of the machine (w x h x d): 80 x 126 x 19.2 mm (3.15 x 4.96 x 0.75 in)

### Conformity

- CE, cULus Listing Mark

### Environment characteristics

- Ambient operating temperature: -15...+ 50°C (5...122°F)

### Supply characteristics

- 5 V ... (200 mA) directly by the controller
- Max. consumption: 1 W

# Modicon M221 and M221 Book logic controllers

Communication via Bluetooth®

Communication via modem and router

## Communication via Bluetooth® wireless link

The Bluetooth® wireless link enables complete freedom of movement within a radius of 10 m (32.808 ft.) around the controller.

For its M221 and M221 Book controllers Schneider Electric offers the Bluetooth® interface **TCSWAAC13FB** so they can perform the following functions:

- Commissioning
- Monitoring
- Up/downloading

Bluetooth® interface **TCSWAAC13FB** (supplied with cordsets for connection to the controller) ([see page 20](#)).

## Communication via modem and router

The communication via modem and router offer is dedicated to the following applications:

- Synchronization between remote machines; direct data exchange between controllers.
- Remote maintenance; access to the controller via the SoMachine Basic programming software.
- Remote control and monitoring of machines; receipt of information and sending commands on GSM phone.

This offer comprises 2 **Schneider Electric** modems (PSTN modem, GSM modem) and a VPN router made by **eWon**.

[Modems, router and connection cables \(see page 30\)](#).

# Modicon M221 and M221 Book logic controllers

## I/O extensions with Modicon TM3 expansion modules

### I/O extensions with Modicon TM3 modules

#### Modicon TM3 expansion modules

Please consult our website: [www.schneider-electric.com](http://www.schneider-electric.com)

The capacity of M221 and M221 Book logic controllers can be enhanced with the Modicon TM3 expansion module offer:

- Digital I/O modules which can be used to create configurations with up to 488 digital I/O. These modules are available with the same connections as the controllers.
- Analog I/O modules which can be used to create configurations with up to 114 analog I/O and are designed to receive, amongst other things, position, temperature or speed sensor signals. They are also capable of controlling variable speed drives or any device equipped with a current or voltage input.
- Expert module for control of TeSys motor-starters, connected with RJ 45 cables to simplify wiring up the control section.
- Functional safety modules which simplify wiring and can be configured in the SoMachine Basic software.

In addition, the TM3 expansion system is flexible due to the possibility of remotely locating some of the TM3 modules in the enclosure or another cabinet, up to 5 meters (16.404 ft.) away, using a bus expansion system.

The Modicon TM3 expansion system is common to the whole range of Modicon M221, M241 and M251 logic controllers, meaning that the controller model can be upgraded without changing extension.

- 1 Modicon M221/M221 Book logic controller
- 2 Modicon TM3 digital I/O modules
- 3 Modicon TM3 analog I/O modules (2)
- 4 Modicon TM3 expert module: control of TeSys motor-starters
- 5 Modicon TM3 functional safety modules
- 6 Modicon TM3 bus expansion modules (transmitter and receiver)
- 7 TM3 bus expansion cable

(1) Depending on type of TM3 module used.

(2) Compatibility of expansion module offers: the majority of Modicon TM2 expansion modules can be used with M221 and M221 Book logic controllers. Nonetheless, adding a Modicon TM2 expansion module to a configuration can increase the expansion module execution times by as much as a few milliseconds. The compatibility between Modicon TM2 expansion modules and each M221 or M221 Book logic controller is specified on page 32.

# Modicon M221 and M221 Book logic controllers

## Control architecture

### Control architecture for standalone machines

#### Typical applications: repetitive machines

- Packaging: recycling machines
- Textile-clothing machines
- Commercial equipment: automatic wash units, advertising hoardings, etc.
- Construction/service sector: access and entry control for automated systems
- Other sectors: woodworking, agriculture, fish farming, incubators, swimming pools, etc.

#### ■ M221 (TM221C••••) controllers

#### ■ M221 Book (TM221M•••) controllers

(1) Only use one switch, as Hubs are not compatible.

# Modicon M221 and M221 Book logic controllers

## Embedded communication, Characteristics

### Embedded communication

#### Communication on Ethernet network

TM221CE\*\*\* and TM221ME\*\*\* controllers have an embedded RJ 45 Ethernet port (10/100 Mbps, MDI/MDIX) with Modbus TCP (Client/Server), EtherNet/IP (adapter), UDP, TCP protocols.

- As well as the default address based on the MAC address, it is possible to assign the controller IP address via a DHCP server or via a BOOTP server.
- The Ethernet port also offers the same application upload/download, update and debug functions when the controller is supplied with power.
- A firewall can be used to lock each communication protocol.

**Connection cables and accessories for Industrial Ethernet** (see page 24).

#### Serial links

- Each TM221C\*\*\* controller has an embedded serial link that can be configured as RS 232 or RS 485. A 5 V/200 mA voltage is available on the RJ 45 connector, which then supplies the **TMH2GDB** display unit, a Magelis **XBTN** or **XBTRT** HMI or the Bluetooth® **TCSWAAC13FB** communication adapter.
- Each TM221M\*\*\* controller has one or two embedded serial links.
- The SL1 serial link, found on each M221 Book controller, can be configured as RS 232 or RS 485. In addition, a 5 V/200 mA voltage is available on the RJ 45 connector which then supplies the **TMH2GDB** display unit, a Magelis **XBTN** or **XBTRT** HMI or the Bluetooth® **TCSWAAC13FB** communication adapter or other devices.
- The SL2 serial link, found on TM221M16\*\*\*, TM221M24\*\*\* and TM221M40\*\*\* controllers only, is configured as RS 485.

Serial links also offer the same upload/download, update and debug functions when the controller is supplied with power. Embedded in both links are the two main commercially-available protocols:

- Modbus ASCII/RTU Master or Slave
- ASCII character string

**Connection cables and accessories for serial link** (see page 22).

#### Software programming with power off charging function

The programming port, equipped with a USB mini-B connector, is embedded in each M221 and M221 Book controller; it is dedicated to communication with a PC equipped with SoMachine Basic for programming, debugging, and maintenance. In addition, it offers the ability to load an application program or update the firmware without the controller being powered by another source.

### Characteristics of M221 and M221 Book logic controllers

- Certifications: CE, UL Listing Mark, CSA, RCM, EAC, LR, ABS, DNV - GL
- Standards: IEC/EN 61131-2 (Edition 2 2007), UL 508 (UL 61010-2-201), ANSI/ISA 12.12.01-2007, CSA C22.2 No. 213, No. 142, E61131-2 and IACS E10

#### Environment

- Ambient operating temperature: - 10...+ 55°C (14...+ 131°F)
- Storage temperature: - 25...+ 70°C (- 13...+ 158°F)
- Relative humidity: 10...95% (non-condensing)

#### Operating altitude:

- 0...2,000 m (0...6,562 ft.) : complete specification for temperature and insulation
- 2,000...4,000 m (6,562...13,123 ft.):
  - temperature derating: + 1°C/400 m (+ 1.8°F/1,312 ft.)
  - insulation losses: 150 V ---/1,000 m (150 V ---/3,280 ft.)
- Storage altitude: 0...3,000 m (0...9,842 ft.)
- Immunity to mechanical stress (vibrations):
  - For 1131: 5...8.4 Hz (amplitude 3.5 mm/ 0.138 in.); 8.4...150 Hz (acceleration 1 g)
  - For merchant navy: 5...13.2 Hz (amplitude 1.0 mm/0.039 in.); 13.2...100 Hz (acceleration 0.7 g)

#### Power supply

Two power supply types are available depending on M221 controller model: 24 V --- or 100-240 V ~ 50/60 Hz

- Voltage limit (including ripple): 19.2...28.8 V ---/85...264 V ~
- Immunity to micro-cuts (class PS-2): 10 ms
- Max. consumption:
  - TM221 powered with AC, depending on model: 31...41 VA without expansion modules, 46...70 VA with maximum expansion module configuration
  - TM221 powered with DC, depending on model: 3.2...4.9 W without expansion modules, 10...23 W with maximum expansion module configuration

## Description

# Modicon M221 and M221 Book logic controllers

## Modicon M221 Book logic controllers

TM221ME16TG

TM221M16T

TM221ME32TK

### Description

#### M221 Book logic controllers (TM221M\*\*\*)

- 1 Removable screw terminal block, 3 terminals for connecting the 24 V  $\text{---}$  supply.
- 2 On TM221ME16●● and TM221ME32●● controllers: RJ 45 connector for Ethernet network, with exchange and activity speed LED indicator.  
On TM221M16●● and TM221M32●● controllers: RJ 45 connector for SL2 serial link.
- 3 SL1 serial link port (RJ 45 connector).
- 4 Behind the removable cover: dedicated removable connector for two analog inputs.
- 5 QR code for identifying the controller technical documentation.
- 6 Backup battery slot.

Behind the removable cover: 7, 8 and 9

- 7 Slot for the industrial SD memory card.
- 8 Run/Stop switch.
- 9 Mini-B USB connector for connecting a PC equipped with the SoMachine Basic software.

10 TM3 bus connector for linking to a Modicon TM3 expansion module.

- 11 LED display block showing:
  - the status of the controller and its components (battery, industrial SD memory card)
  - the status of the serial links
  - the status of the I/O

12 Connection of 24 V  $\text{---}$  logic inputs:

- on 16-channel controllers: removable screw or spring terminal blocks (1)
- on 32-channel controllers: HE10 connector

13 Connection of relay/transistor logic outputs:

- on 16-channel controllers: removable screw or spring terminal blocks (1)
- on 32-channel controllers: HE10 connector

14 Clip for locking on  $\text{L}-\text{R}$  symmetrical rail.

(1) Removable terminal blocks equipped with screw terminals or spring terminals depending on the controller type. Terminal blocks supplied with M221 Book controller.

#### Presentation

RS 232/RS 485 serial links offer a simple solution to the communication needs of compact machines.

Modbus and ASCII standard communication protocols are used to connect numerous equipment items such as: HMIs, printers, energy meters, variable speed drives, motor starters, remote I/O (RIO), etc. Thanks to the I/O Scanner function, this equipment is just as easy to integrate into the application as the local I/O.

#### Description

■ Modicon M221 Book logic controllers with 16, 24 or 40 I/O have the following on the front panel:

- 1 A serial link port with an RJ 45 connector delivering a voltage of 5 V (200 mA) to supply an HMI or Bluetooth® adapter with power.
- 2 A slot for a 2<sup>nd</sup> serial link port (with connection on screw terminals) by inserting the **TMC2SL1** communication cartridge or the **TMC2CONV01** application cartridge (1).

■ Modicon M221 Book logic controllers with 16 or 32 I/O have the following on the front panel:

- 3 A serial link port with an RJ 45 connector delivering a voltage of 5 V (200 mA) to supply an HMI or Bluetooth® adapter with power
- 4 A 2<sup>nd</sup> serial port also equipped with an RJ 45 connector for **TM221M16●●** and **TM221M32●●** controllers (controllers without embedded Ethernet).

Controller Type	Embedded Ports	Optional Port (1 max. per controller)
	"Serial" or Serial 1" port, RJ 45 connector	On TMC2SL1 or TMC2CONV01 option cartridges, connection on screw terminals
<b>TM221C●●●</b>	RS 232/RS 485 with 5 V (200 mA) power supply for HMI or Bluetooth communication adapter (items 1/3)	–
<b>TM221M●●●</b>	RS 485 (item 4)	–
<b>TM221ME●●●</b>	–	–

(1) TM221C40●●● controllers have 2 slots for a cartridge; only one cartridge, TMC2SL1 or TMC2CONV01, can be used per controller. The other slot remains available for an analog I/O cartridge or an application cartridge.

#### Modbus serial link wiring system

Non-isolated bus

- Total length of cables between M221 and ATV 12: ≤ 30 m (98.425 ft)  
- Length of cable 4: ≤ 10 m (32.808 ft)

★ Line polarization active. ■ Line termination

Isolated bus (recommended for bus > 10 m/32.808 ft)

- Total length of cables between isolation boxes 1: ≤ 1,000 m (3,280.840 ft)  
- Length of drop cables 4 or 5: ≤ 10 m (32.808 ft)

★ Line polarization active. ■ Line termination

(1) Box powered by the logic controller.

Cordsets for RS 232 serial link						
TCSMCN3M4F3C2	<b>Cordset for DTE terminal (printer) (3)</b>	Serial link for DTE (2) 1 x RJ 45 connector and 1 x 9-way female SUB-D connector	—	3 m 9.843 ft	TCSMCN3M4F3C2	0.150 0.331
TCSMCN3M4M3S2	<b>Cordset for DCE terminal (modem, converter)</b>	Serial link for point to point device (DCE) 1 x RJ 45 connector and 1 x 9-way male SUB-D connector	—	3 m 9.843 ft	TCSMCN3M4M3S2	0.150 0.331

(1) Line isolation recommended for line distances &gt; 10 m (32.808 ft).

(2) Can only be connected to the controller SL or SL1 ports in order to supply the Magelis terminal with power.

(3) If the terminal is equipped with a 25-way SUB-D connector, you will also need to order the 25-way female/9-way male SUB-D adapter TSXCTC07.

### General

Industrial Ethernet is the term used to refer to industrial communication protocols using Ethernet standard physical layers such as:

- EtherNet/IP
- Modbus TCP
- TCP and UDP

The following equipment can be connected to an Industrial Ethernet network:

- industrial products (industrial communication protocols) such as controllers, variable speed drives, robots, etc.
- products using TCP/UDP-based proprietary protocols

In addition, it is possible to use different Ethernet Industrial protocols on the same network simultaneously.

### EtherNet/IP protocol

EtherNet/IP is an industrial communication protocol based on CIP (Common Industrial Protocol), owned and managed by the ODVA, an independent standards organization ([www.odva.org](http://www.odva.org)).

EtherNet/IP is the result of implementing CIP on standard Ethernet. EtherNet/IP operates on the same device and the same infrastructure as Modbus TCP, and both protocols can be activated simultaneously on the network at any time.

EtherNet/IP is a robust protocol for use with sophisticated devices, such as cameras and robots.

### Advanced services and outstanding performance

EtherNet/IP is object-oriented. In each EtherNet/IP device, the data is arranged as objects and each device can be associated with several types of object depending on its intended use. Integration of devices is made easy thanks to predefined and standard objects.

The EtherNet/IP protocol uses an Originator/Adapter architecture to exchange data.

### Modbus TCP/IP protocol

Modbus has been the industry communication standard since 1979. During the internet revolution, Modbus was combined with Ethernet to form Modbus TCP, a completely open Ethernet protocol.

### Modbus TCP, simple and open

The Modbus application layer is simple and universally familiar with its 9 million installed connections.

- Thousands of manufacturers have already implemented this protocol. Many have already developed a Modbus TCP connection and numerous products are currently available.
- The simplicity of Modbus TCP enables any fieldbus device, such as an I/O module, to communicate over Ethernet without the need for a powerful microprocessor or a lot of internal memory.

### Modbus TCP, a standard

- The application protocol is identical on Modbus serial link and Modbus TCP; messages can be routed from one network to the other without converting the protocol.
- Since Modbus operates on the TCP higher layer, users benefit from IP routing, thus enabling devices located anywhere in the world to communicate without worrying about the distance between them. Modbus and Modbus TCP are recognized as a fieldbus by the international standard IEC/EN 61158. They also comply with the "national Chinese standard" managed by ITEI.

The Modbus TCP protocol uses a Client/Server architecture to exchange data.

# Modicon M221 and M221 Book logic controllers

## Industrial Ethernet network

### Modicon M221, M241, and M251 logic controllers

The embedded Ethernet communication ports in Modicon M221, M241, and M251 logic controllers and in the Modicon TM4ES4 communication module optimize the capability for integration into factory network architectures.

Modicon M221, M241, and M251 logic controllers can be easily integrated into typical architectures:

- machine-to-device (variable speed drives, remote I/O modules, operator dialog terminals) with the I/O Scanner function
- machine-to-machine with the NGVL function
- machine-to-supervisory system with the Modbus Client/Server and EtherNet/IP adapter functions

Ethernet also brings transparency to the factory, in particular - thanks to the firewall functions - making it possible to perform the following functions securely from any point on the network:

- program, monitor a controller, or download an application
- access device parameters (variable speed drives, for example)

A simple web browser can be used to access machines anytime anywhere, using a tablet or smartphone, for example, by means of the Web servers embedded in Modicon M241 and M251 controllers.

Security can be enhanced through the use of VPN modems; refer to our partner program on our website [www.schneider-electric.com](http://www.schneider-electric.com) > Products and Services > Automation and Control > Collaborative Automation Partner Program.

Preconfigured Web server

### Web servers

#### Preconfigured Web server

Using a simple web browser available on PC, smartphone, or tablet, this server authorizes the following "ready-to-use" functions:

- With no prior programming
  - Display of I/O States
  - Diagnostics of controller, expansion modules, and communication modules
  - Communication port diagnostics
  - I/O Scanner function diagnostics
  - Maintenance and configuration functions (EtherNet/IP, firewall, etc.)
- After configuration
  - Visualization of data values
  - Visualization of how these data values evolve over time (oscilloscope function)

#### Web visualization server

SoMachine programming software is used to create customized pages for visualizing and monitoring devices. These pages can also be accessed on any mobile device such as a tablet or smartphone with any operating system (iOS, Android, Windows).

(1) SoMachine configuration software: please refer to catalog DIA3ED2140110EN.pdf or our website [www.schneider-electric.com](http://www.schneider-electric.com)

- FDR: Fast Device Replacement
- DTM: Device Type Manager
- TVDA: Tested, Validated, Documented Architectures

(2) Integration as a generic device

Web visualization server

I/O scanning (Industrial Ethernet Manager)

### Description of Ethernet services

#### Network Global Variable List (NGVL)

The NGVL protocol allows a controller to share data with other controllers on a local Ethernet network (LAN) or subscribe to data published by other controllers that support the NGVL protocol thus allowing, for example, synchronization between control platforms.

#### I/O scanning (Industrial Ethernet Manager)

The Industrial Ethernet Manager service is used to manage the exchange of remote I/O states over Ethernet after a simple configuration operation, with no need for special programming.

I/O scanning is performed transparently by means of read/write requests in accordance with the Modbus TCP or EtherNet/IP protocol; this is called Scanner Manager on Modbus TCP or Scanner Manager on EtherNet/IP.

#### Modbus TCP Slave

This function can be used to create a dedicated I/O table in the controller that can be accessed via the Modbus TCP protocol and by a controller with the Modbus TCP I/O Scanner function.

#### Fast Device Replacement (FDR)

This service uses standard address management technologies (BOOTP, DHCP) and the TFTP (Trivial File Transfer Protocol) file management service in order to simplify maintenance of Ethernet products.

The FDR service is used to replace a device with a new device; the device is detected, reconfigured, and automatically rebooted by the system.

#### Access to files via FTP (File Transfer Protocol)

This service provides access to the controller files from, for example, a PC (FTP client) and is used to exchange files such as application programs, data, etc.

This service can be accessed even if the controller has no application program in its memory.

#### Dynamic Host Configuration Protocol (DHCP)

This protocol is used to automatically assign an address to a controller (DHCP/BOOTP client). This address can be:

- fixed and determined either in the SoMachine software or included in a post-configuration file
- assigned by a controller with the DHCP server or BOOTP server function (such as the TM251MESE logic controller)

#### SNMP (Simple Network Management Protocol)

From a network management station, SNMP is used to monitor and control the Ethernet architecture components, allowing detected errors to be diagnosed quickly. The SNMP protocol is used to access configuration and management objects that are contained in the device MIBs (management information bases).

Modicon M241 and M251 controllers support the "MIB 2 Standard" SNMP network management interface. This interface accesses a first level of network management; it enables the manager to identify the devices making up the architecture and retrieve general information about configuration and operation of the Ethernet Modbus TCP interfaces.

#### IP address filter (Whitelisting)

IP addresses that are authorized to access the controller can be loaded in the controller from either an SD card or an FTP client.

#### Locking communication protocols

Not only SoMachine, NetManage (1), and SNMP communication protocols but also Modbus, WEB, and FTP servers can be locked individually in the SoMachine software.

#### EtherNet/IP adapter

This function can be used to create a dedicated I/O table in the controller that can be accessed via the EtherNet/IP protocol and by a controller with the Ethernet/IP originator function. EtherNet/IP adapter is used in the same way for EtherNet/IP as a Modbus TCP slave.

#### EtherNet/IP originator

Controllers with this function trigger exchanges with devices featuring the EtherNet/IP adapter function. EtherNet/IP originator is used in the same way for EtherNet/IP as a Modbus TCP master.

(1) The NetManage function can automatically detect which controllers are present on the network. It also offers the option of straightforward connection to any controller present on the network in order to identify it physically by means of a visual or audible message and modify its parameters or manage the resident application.

### Transparent Ready class and functions

### Modicon M241 and M251 controller network characteristics

Topology	Daisy chain and star using switches
Bandwidth	10/100 Mbps
EtherNet/IP scanner performance	Up to 16 slave devices controlled by the controller in 10 ms
Ethernet Modbus TCP scanner performance	Up to 64 slave devices controlled by the controller in 64 ms

Note: When EtherNet/IP and Modbus TCP devices are controlled on the same network simultaneously, a maximum of 16 devices can be controlled (EtherNet/IP + Modbus TCP).

### Ethernet ports on logic controllers and the Ethernet switch module

#### M221 logic controllers

- 1 On TM221ME\*\*\* controllers: RJ45 connector for Ethernet network, with speed and activity LED
- 2 On TM221CE\*\*\* controllers: RJ45 connector for Ethernet network, with speed and activity LED

#### M241 logic controllers

- 3 On TM241CE\*\*\* controllers: RJ45 connector for Ethernet network, with speed and activity LED

#### M251 logic controllers

- 4 On TM251MESE and TM251MESC controllers: 2 connectors connected by an RJ45 internal switch for "Machine or Factory" Ethernet network, with speed and activity LED
- 5 On TM251MESE controller: RJ45 connector for "fieldbus" Ethernet network with speed and activity LED. This port can be used with the Industrial Ethernet Manager function.

#### TM4ES4 Ethernet switch communication module

- 6 4 RJ45 connectors for Ethernet network with speed and activity LED

### Industrial Ethernet architecture

M251\_62130\_ADDLT16001

**Note:** The ports on M251 controllers and the TM4ES4 communication module cannot be used to create redundant architectures.

(1) Wireless Ethernet access, see our partner program.

(2) Excludes Modicon TM241CEC24● controller.

Items 1, 2, and 3: see references on next page.

**Item 4:** Ethernet jumper cables XGSZ●2E45●● (M12 straight/RJ45, shielded cable, straight cabling) for OsiSense XUW vision sensors.

For more information, see our partner website [www.tesensors.com](http://www.tesensors.com)

### Shielded copper connection cables

ConneXium shielded connection cables are available in 2 versions to meet the requirements of the various current standards and approvals:

#### ■ EIA/TIA 568 shielded twisted pair cables for CE market

These cables conform to:

- EIA/TIA-568 standard, category CAT 5E
- IEC ???11801/EN 50173-1 standard, class D

Their fire resistance conforms to:

- NF C32-070 standard, class C2
- IEC 322/1 standards
- Low smoke zero halogen (LSZH)

#### ■ EIA/TIA 568 shielded twisted pair cables for UL market

These cables are:

- CEC type FT-1
- NEC type CM

A new range of ConneXium fully shielded preassembled cables has been specially designed for use in harsh industrial environments. These cables combine a category 5E shielded cable and RJ45 connectors reinforced with a metal profile.

#### Do it Yourself copper cable and connectors

The ConneXium "Do it Yourself" offer consists of 2 connector references (M12 and RJ45) and 1 cable reference - 300 m (984.25 ft) reel - enabling Ethernet 10/100 Mbps network cables to be made up in situ.

The maximum length of cables made up in this way is 80 m (262.47 ft.). They are assembled using only a knife and wire cutters (no special tool is required).

TCSESU053FN0

# Modicon M221 and M221 Book logic controllers

## Communication via modem and router

### Presentation

The communication via modems and routers offer is dedicated to the following applications:

- Synchronization between remote machines; direct data exchange between controllers.
- Remote maintenance; access to the controller via the programming software (SoMachine or SoMachine Basic).
- Remote control and monitoring of machines; receipt of information and sending commands on GSM phone.

This offer comprises 2 Schneider Electric modems (PSTN and GSM) and a VPN router made by Ewon®.

Setting up this router requires installation of two configuration software programs.

#### PSTN and GSM modems

Both these modems can either be used on the machine or connected to the PC if it does not have a modem. On the machine side, they are then connected to the logic controller SL or SL1 serial port (1). On the PC side, they use a USB port.

#### VPN router

The eWON Cosy is an industrial VPN router designed to offer easy remote access, via the Internet.

On the machine side, it is connected to the controller Ethernet port. The router establishes a secure VPN connection via the plant LAN. This is an outgoing connection compatible with the firewalls. Remote users can only access the machine's LAN, not the customer's LAN.

(1) Modems cannot be connected to either the logic controller SL2 port or the TMC2SL1 cartridge.

### Applications

		Modems		Router
		SR2MOD01	SR2MOD03	Ewon Cosy 141
Type of connection between logic controller and modem/router		Serial link	Serial link	Ethernet
Remote maintenance	<input type="checkbox"/> Monitoring via the protocol for programming and writing variables (1) <input type="checkbox"/> Application transfer/download <input type="checkbox"/> Online program modification (writing code)	M221, M221 Book (2)	M221, M221 Book	M221, M221 Book, M241, M251
Remote data logging	File reading/writing	–	–	M241, M251
Synchronization between machines	Modbus exchanges	M221, M221 Book M241, M251	–	–
Remote control	Receipt/sending of "SMS"	–	M221, M221 Book M241, M251 (3)	–
	Viewer Web server (HTTP)	–	–	M241, M251
	OPC communication (4) (on Modbus protocol)	M221, M221 Book, M241, M251	–	–

#### Logic controller supporting the application

(1) Including Run/stop, Init.

(2) Modbus ASCII.

(3) Function blocks in SoMachine and SoMachine Basic programming software.

(4) The OPC (Object Linking and Embedding for Process Control) standard defines communication between Windows applications and the hardware/software used regularly in the field of process control (e.g.: controllers). The OPC standard describes a coherent and universal way of accessing field data in the factory devices.

<b>Expert modules (counter modules)</b>	TM200HSC206DT				
	TM200HSC206DF				

Compatible

Not compatible

Note: The TWD•••• range of expansion and communication modules is not compatible with the Modicon M221/M221 Book/M241/M251 logic controller offer.

## Configuration

- Modicon TM3 expansion modules are powered by logic controllers via the bus connector on the side of the products. This connector delivers 2 voltages, 5 V and 24 V. For the Modicon M221 and M221 Book logic controllers, you should therefore calculate the total TM3 expansion module consumption and check that it is definitely compatible with the maximum current delivered by the controller. This information is available on each product data sheet or in the hardware reference guide. This can be checked very quickly in the SoMachine Basic programming software setup page.
- For Modicon M241 and M251 logic controllers, up to 7 TM2 expansion modules can be attached regardless of these module references.
