

Compact ready-to-install self-adjusting equipment complete with microprocessor based controller, capacitors, control gear and protection devices. RAM 2950 is especially designed for central or sub-department PF correction of lower power systems with low or moderate harmonic content.

TECHNICAL SPECIFICATION

Rated voltage:	400 V, 440 V (other rated voltages on request)
Frequency:	50 Hz (60 Hz on request)
Temperature:	-10 + 40°C
Cabinet:	Sheet steel, zinc plated frame, painted cover (grey RAL7035 colour) Wall mount, top cable entry (neutral not required) Hinged tilting and/or removable cover with screw lock
Cooling:	Natural air circulation
Protect.degree:	IP30 with closed cabinet
Controller:	VARACTOR 180, with Self-Programming - No user set-up required Digital PF indicator, automatic detection of CT value and polarity. Integrated SUPERTEC switching control system.
Capacitors:	20 sec. switching interval, target PF set to .98 (other settings on request) Standard duty types: self-healing metallised polypropylene dielectric. delta-connected single phase capacitors rated 440V, -25/D (55°C) temperature class, aluminium can with overpressure disconnector and discharge resistors. Heavy duty types: heavy duty gas-filled (nitrogen) self-healing metallised polypropylene dielectric, 3-phase capacitors rated 440V, temperature class -25/D (55°C), aluminium can with overpressure disconnector and discharge resistors.
Contactors:	With inrush current suppressors (soft switching system) SUPERTEC switching control system integrated in the controller
Protections:	Load break isolating switch, HRC (NH00) fuses
Losses:	Equipment: < 1,5 W/kvar
Installation:	Indoor, R.H. < 90% (non condensing), altitude < 2000 m.
Standards:	EN 60439-1/2, EN 61921-1, EN 60831-1/2

On request:

- Other rated voltages and frequencies
- IP54 cabinet size 600 x 250 x 1000 mm
- Equipment for cogeneration systems

VARACTOR 180 microprocessor controller

- microprocessor operation
- digital PF indicator
- automatic correction of CT orientation
- automatic recognition of CT value
- self-programming - No user set-up required

Built-in SUPERTEC switching control system

Microprocessor-based system built-in to the Varactor 180 controller ensuring:

- "intelligent" solid-state contactors control
- stabilised contactors supply over extreme line variations
- comprehensive extension of contactor and capacitor life
- 90% reduction of contactor heat dissipation

Expandable power

The double power rating indicates units already sized and prepared for future power expansion to the value in brackets. The expansion is quickly carried out on-site (without cabinet removal and without any special tool), by fitting and connecting the capacitors only, supplied in kit complete with connecting leads.

Expansion kit	P.N.
