Motor starter protector with spring-loaded terminals, size S0 (left) and motor starter protector with screw terminals, size S00 (right)

Video: SIRIUS 3RV2 circuit breakers - Motor protection for machinery and plants (0.11 to 100 A)

The SIRIUS 3RV2 motor starter protectors/circuit breakers are compact, current limiting motor starter protectors/circuit breakers which are optimized for load feeders. The motor starter protectors/circuit breakers are used for switching and protecting three-phase motors of up to 55/45 kW at 400 V AC and for other loads with rated currents of up to 100 A.

3RV2 motor starter protectors are usually approved according to IEC and UL/CSA. According to UL 508/UL 60947-4-1, the 3RV2 motor starter protectors/circuit breakers in sizes S00 to S3 are approved as:

- "Manual Motor Controllers"
- "Manual Motor Controllers" for "Group Installations"
- "Manual Motor Controllers Suitable for Tab Conductor Protection in Group Installations"
- "Self-Protected Combination Motor Controllers (Type E)"
Please note that for this approval the 3RV20 motor starter protectors must be equipped with additional infeed terminals or phase barriers. For more information, see page 7/57.

Corresponding short-circuit values, see pages 7/9 to 7/16.

Protection equipment

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

General data

The 3RV2...-....-0BA0 motor starter protectors/circuit breakers can be used at low ambient temperatures down to -50 °C.

3RV20...-....-0DA0 motor starter protectors/circuit breakers for system protection according to IEC, 3RV24...-....-0DA0 for transformer protection according to IEC and 3RV27 and 3RV28 circuit breakers according to UL 489 can be used for 1-phase, 2-phase and 3-phase loads, as these motor starter protector/circuit breakers do not have asymmetry detection.

The 3RV27 and 3RV28 circuit breakers are approved as circuit breakers according to UL 489; they are a special version of the 3RV2 motor starter protectors.

Thanks to their dimensions, the 3RV1011 motor starter protectors are suitable for installation in enclosures or under cramped installation conditions.

Type of construction

The 3RV2 motor starter protectors are available in four sizes:

- Size S00 – width 45 mm,
max. rated current 16 A,
at 400 V AC suitable for three-phase motors up to 7.5 kW
- Size S0 – width 45 mm,
max. rated current 40 A,
at 400 V AC suitable for three-phase motors up to 18.5 kW
- Size S2 – width 55 mm,
max. rated current 80 A,
at 400 V AC suitable for three-phase motors up to 37 kW
- Size S3 – width 70 mm,
max. rated current 100 A,
at 400 V AC suitable for three-phase motors up to 45/55 kW

Circuit breakers according to UL 489

The 3RV27 and 3RV28 circuit breakers are available in two or three sizes:

- Size S00 – width 45 mm,
max. rated current 15 A, for 480 Y/277 V AC
- Size S0 – width 45 mm,
max. rated current 22 A, for 480 Y/277 V AC
- Size S3 – width 70 mm,
max. rated current 70 A, for 480 Y/277 V AC

Connection methods

The 3RV2 motor starter protectors/circuit breakers can be supplied with screw terminals and spring-loaded terminals.

Screw terminals

Spring-loaded terminals

The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.

Voltage data

The data for 3-phase power systems according to IEC 60947-4-1 are valid for the following line system configurations:

Voltage U_e	Line system configurations	
	Three-phase four-wire networks	Three-phase three-wire networks
V	V	V
230	--	230
400	230/400	400
440	260/440	440
500	--	500
690	400/690	690 (only as from size S3)
1 000	--	1 000

-- Not specified

Use in hazardous areas

The 3RV20 motor starter protectors for motor protection (without 3RV20...-....-0BA0 and -0DA0) have certification according to both the European Explosion Protection Directive (ATEX) and the International Explosion Protection Standard (IECEx).

According to the European Directive (ATEX), the 3RV20 (without 3RV20...-....-0BA0 and -0DA0) are able to switch and protect explosion-proof motors of type of protection "Increased Safety EEx e".

According to the international guideline (IECEx), the 3RV20 (without 3RV20...-....-0BA0 and -0DA0) are able to switch and protect motors of the types "Increased Safety Ex e" or "Flameproof enclosure Ex d".

Protection equipment

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

General data

Circuit protection devices with measuring and communication capabilities

The SIRIUS wireless auxiliary and signaling switch 3RV2921-5M (3RV2 COM) is available as an accessory for 3RV2 motor starter protectors (sizes S00 to S3). This switch acquires the switching states of the motor starter protector in addition to the number of disconnections. The motor starter protector states are transmitted wirelessly by means of the integrated communication function. The 3RV2 COM wireless auxiliary and signaling switch is a component of SENTRON digitalization solutions.

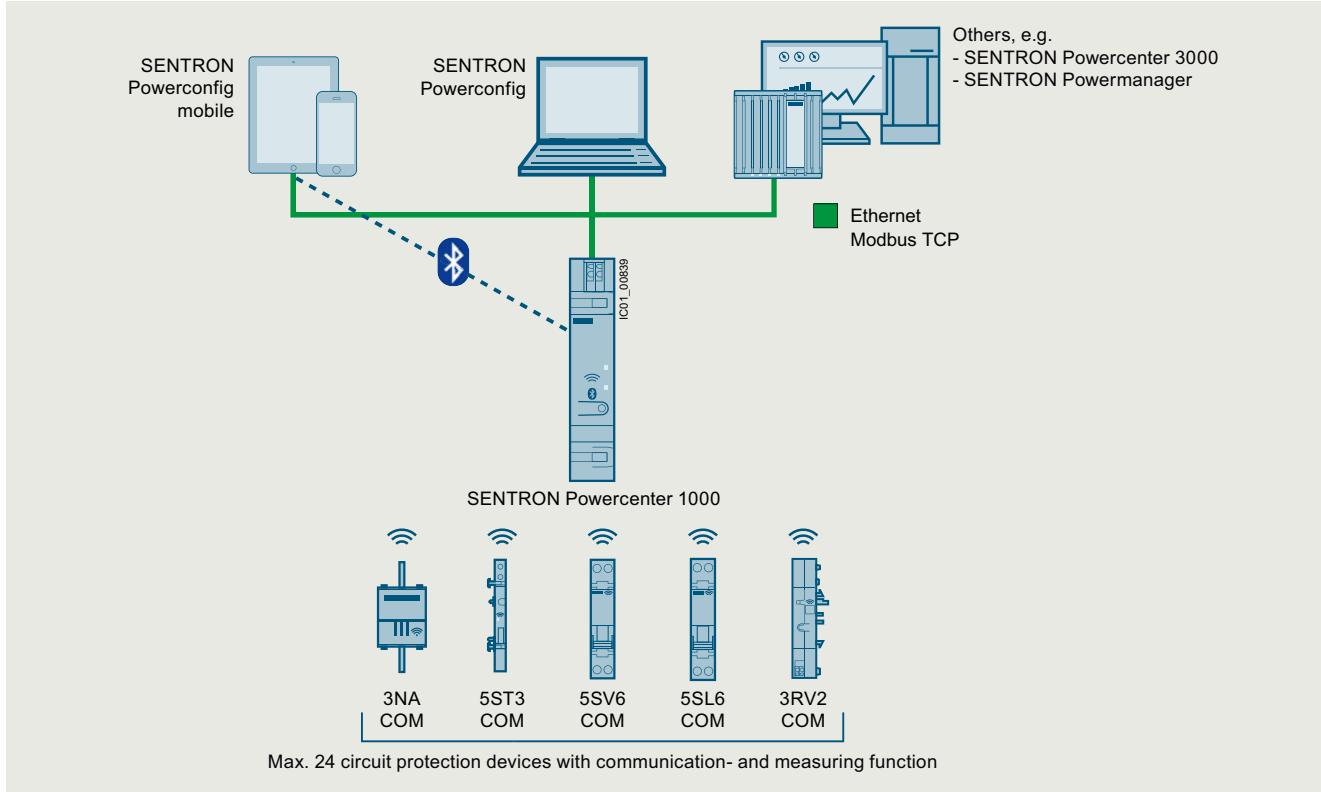

The SENTRON Powercenter 1000 data transceiver is the core element of this system of communication-capable circuit protection devices. It acquires measured values and status messages from the paired devices and transmits them to higher-level systems.

The data from up to 24 communication-capable devices are transmitted wirelessly to a SENTRON Powercenter 1000, which stores selected data for up to 30 days.

Higher-level systems can access the data via the data transceiver interfaces. Either locally via Bluetooth or via Ethernet in the local network. The Modbus TCP protocol used can easily be integrated by other systems.

Commissioning of the system is easy using the SENTRON powerconfig PC software or the SENTRON powerconfig app for mobile devices.

For more information, see the Installation Manual – SENTRON Circuit protection devices with communication and measuring function.

7

The system of circuit protection devices with communication and measuring function increases system availability as it offers greater transparency through to the branch circuit as well as wireless transmission and storage of measured values.

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

General data

Article number scheme

Product versions	Article number
Motor starter protector/circuit breaker	3RV2 □□□ - □□□□□ - □□□□
Type of motor starter protector/circuit breaker	e.g. 0 = for motor protection/system protection
Size	e.g. 1 = 16 A (7.5 kW) for size S00
Breaking capacity	e.g. 1 = standard switching capacity
Setting range for overload release	e.g. 1A = 1.1 ... 1.6 A
Trip class (CLASS)	e.g. A = a (adjustable CLASS 10)/n (13 or 20 x I_n)
Connection methods	e.g. 1 = screw terminals
With or without auxiliary switch	e.g. 0 = without
Special versions	□□□□
Example	3RV2 0 1 1 - 1 A A 1 0

Note:

The article number scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

Application

Operating conditions

3RV2 motor starter protectors/circuit breakers are suitable for use in any climate. They are intended for use in enclosed rooms in which no severe operating conditions (such as dust, caustic vapors, hazardous gases) prevail. When installed in dusty and damp areas, suitable enclosures must be provided.

3RV2 motor starter protectors/circuit breakers can optionally be fed from the top or from below.

The permissible ambient temperatures, the maximum switching capacities, the tripping currents and other boundary conditions can be found in the technical specifications and tripping characteristics.

3RV2 motor starter protectors/circuit breakers are suitable for operation in IT systems (IT networks). In this case, the different short-circuit breaking capacity in the IT system must be taken into account, [see page 7/11](#).

Since operational currents, starting currents and current peaks are different even for motors with identical power ratings due to the inrush current, the motor ratings in the selection tables are only guide values. The specific rated and startup data of the motor to be protected are always paramount to the choice of the most suitable motor starter protector/circuit breaker. This also applies to motor starter protectors for transformer protection.

Possible uses

The 3RV motor starter protectors/circuit breakers can be used:

- For short-circuit protection
- For motor protection (also with overload relay function)
- For system protection
- For short-circuit protection for starter combinations
- For transformer protection
- As main and EMERGENCY OFF switches
- For operation in IT systems (IT networks)
- In hazardous areas (ATEX, IECEx)
- As circuit breakers according to UL 489 (3RV27 and 3RV28)
- For fuse monitoring
- For distance protection

Use of SIRIUS protection devices in conjunction with IE3 and IE4 motors

Note:

For the use of 3RV2 motor starter protectors/circuit breakers in conjunction with high-efficiency IE3 and IE4 motors, please observe the information on dimensioning and configuring, [see Application Manual](#).

For more information, [see page 1/8](#).

Short-circuit breaking capacity I_{cu} , I_{cs} according to IEC 60947-2

The table shows the rated ultimate short-circuit breaking capacity I_{cu} and the rated service short-circuit breaking capacity I_{cs} of the 3RV motor starter protectors/circuit breakers with different operating voltages dependent on the rated current I_n of the motor starter protectors/circuit breakers.

Power can be supplied to the motor starter protectors/circuit breakers via the terminals at the top or at the bottom without restricting the rated data. If the short-circuit current at the installation location exceeds the motor starter protector/circuit breaker's specified rated short-circuit breaking capacity, you will need to use a back-up fuse. It is also possible to install

an upstream motor starter protector/circuit breaker with a limiter function.

The maximum rated current of this back-up fuse is indicated in the tables. The rated ultimate short-circuit breaking capacity then applies as specified on the fuse.

Fuseless design

Motor starter protector/contactor assemblies for short-circuit currents up to 150 kA can be ordered as 3RA2 fuseless load feeders, [see page 8/5 onwards](#).

5) Alternatively, fuseless limiter combinations for 690 V AC can also be used.

Limiter function with standard devices for 500 V AC and 690 V AC according to IEC 60947-2

The table shows the rated ultimate short-circuit breaking capacity I_{cu} and the rated service short-circuit breaking capacity I_{cs} with an upstream standard motor starter protector/circuit breaker that fulfills the limiter function at voltages 500 V AC and 690 V AC.

The short-circuit breaking capacity can be increased significantly with an upstream standard motor starter protector/circuit breaker with limiter function. The motor starter protector/circuit breaker which is connected downstream must be set to the rated current of the load.

With motor starter protector/circuit breaker assemblies, note the clearance to grounded parts and between the motor starter protectors/circuit breakers. Short-circuit-proof wiring between the motor starter protectors/circuit breakers must be ensured. The motor starter protectors/circuit breakers can be mounted side by side in a modular arrangement.

-- No limiter required

1) 10% overvoltage.

2) 5% overvoltage.

3) Use 3RV29.8-1K phase barriers on the infeed side.

4) Infeed to the limiter is always on the side 1L1/3L2/5L3.

5) Infeed to the limiter only on the side 2T1/4T2/6T3. Use 3RV2948-1K phase barriers on the infeed side.

Protection equipment**Motor starter protectors/circuit breakers
SIRIUS 3RV2 motor starter protectors/circuit breakers****General data****Permissible rated data of devices approved for North America (UL/CSA)**

Motor starter protectors of the 3RV2 series are approved for UL/CSA, and according to UL 508/UL 60947-4-1 and CSA C22.2 No. 14/CSA C22.2 No. 60947-4-1 they can be used on their own or as load feeders in combination with a contactor.

These motor starter protectors/circuit breakers can be used as "Manual Motor Controllers" for "Group Installations", as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations" and as "Self-Protected Combination Motor Controllers (Type E)".

3RV motor starter protectors as "Manual Motor Controllers"

If used as a "Manual Motor Controller", the motor starter protector is always operated in combination with an upstream short-circuit protection. Approved fuses or circuit breakers according to UL 489/CSA C22.2 No. 5 may be used for this purpose.

These devices must be dimensioned according to the National Electrical Code (UL) or Canadian Electrical Code (CSA).

The file numbers for the approval of the 3RV as a manual motor controller are as follows:

- UL File No. 47705, CCN: NLRV
- CSA Master Contract 165071, Product Class: 3211

¹⁾ hp rating = Power rating in horse power (maximum motor rating).

²⁾ FLA = Full Load Amps (motor full load current).

³⁾ Corresponds to "short-circuit breaking capacity" according to UL/CSA.

⁴⁾ Values in brackets only apply to 3RV2.23 motor starter protectors.

⁵⁾ With Class J fuse.

⁶⁾ With Class J fuse 300 A.

Protection equipment

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

General data

3RV20 motor starter protectors (up to 100 A) as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations"

The application as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations" is only available for UL. CSA does not recognize this approval! When the motor starter protector is used as a "Manual Motor Controller Suitable for Tap Conductor Protection in Group Installations", it must always be combined with upstream short-circuit protection. Approved fuses or circuit breakers according to UL 489 may be used for this purpose.

These devices must be dimensioned according to the National Electrical Code.

The 3RV20 motor starters are approved as "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations" under the following file number:

- UL File No. 47705, CCN: NLRV

¹⁾ hp rating = Power rating in horse power (maximum motor rating).

²⁾ FLA = Full Load Amps (motor full load current).

³⁾ Corresponds to "short-circuit breaking capacity" according to UL.

Protection equipment**Motor starter protectors/circuit breakers
SIRIUS 3RV2 motor starter protectors/circuit breakers****General data**3RV20 motor starter protectors (up to 100 A) as "Self-Protected Combination Motor Controllers (Type E)"

UL 508/UL 60947-4-1 approval demands 1-inch clearance and 2-inch creepage distances at line side for "Self-Protected Combination Motor Controllers".

Therefore, 3RV20 motor starter protectors of sizes S00 to S3 are approved according to UL 508/UL 60947-4-1 in combination with the terminal blocks listed below.

CSA does not require these extended clearance and creepage distances. According to CSA, these terminal blocks can be

omitted when the device is used as a "Self-Protected Combination Motor Controller".

The 3RV20 motor starter protectors are approved as "Self-Protected Combination Motor Controllers" under the following file numbers:

- UL File No. E156943, CCN: NKJH
- CSA Master Contract 165071, Product Class: 3211 08

¹⁾ hp rating = Power rating in horse power (maximum motor rating).

²⁾ FLA = Full Load Amps (motor full load current).

³⁾ Corresponds to "short-circuit breaking capacity" according to UL/CSA.

⁴⁾ Not required for CSA.

⁵⁾ Alternatively 3RV2928-1K phase barrier can be used.

Protection equipment

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

General data

3RV27 and 3RV28 motor starter protectors as "circuit breakers"

These motor starter protectors are approved as circuit breakers according to UL 489 and CSA C22.2 No. 5. They can be used therefore as upstream short-circuit protective devices for "Manual Motor Controllers" and "Manual Motor Controllers Suitable for Tap Conductor Protection in Group Installations".

3RV27 and 3RV28 motor starter protectors are approved as "circuit breakers" under the following file numbers:

- UL File No. E235044, CCN: DIVQ
- CSA Master Contract 165071, Product Class: 1432 01

Removable box terminals ³⁾				
• With copper bars ⁴⁾	mm	2 x 12 x 4		--
• With cable lugs ⁵⁾				
- Terminal screw	M6			
- Prescribed tightening torque	Nm	4.5 ... 6		
- Usable ring cable lugs	mm	$d_2 = \text{min. } 6.3$		
	mm	$d_3 = \text{max. } 19$		

1) "Technical specifications" for 3RV16 voltage transformer circuit breakers, see page 7/23.

2) If two different conductor cross-sections are connected to one clamping point, both cross-sections must be in the range specified.

3) Cable lug and busbar connection possible after removing the box terminals. This does not apply for 3RV2742.

4) If bars larger than 12 mm x 10 mm are connected, a 3RT2946-4EA2 cover is needed to maintain the required phase clearance, see page 7/59.

5) If conductors larger than 25 mm² are connected, the 3RT2946-4EA2 cover is needed to maintain the required phase clearance, see page 7/59.

Conductor cross-sections for auxiliary and control circuits ¹⁾		3RV2.11	3RV1011/ 3RV1611- 0BD10 ²⁾	3RV2.21	3RV2.3	3RV2.4	3RV27, 3RV28

Type				
Size				
Dimensions (W x H x D)	mm	45 x 90 x 70	45 x 90 x 70	45 x 90 x 70
Rated current I_n	A	1.4	2.5	3
Ambient temperature	°C	-50 ... +80		
• During storage/transport	°C	-20 ... +60 (up to +70 °C possible with current reduction)		
• During operation				
Rated operational voltage U_e	V	400		
Rated frequency	Hz	16.66 ... 60		
Rated insulation voltage U_i	V	690		
Short-circuit breaking capacity I_{cu} at 400 V AC	kA	50		
Set value of the thermal overload release	A	1.4	2.5	3
Response value of the instantaneous electronic release	A	6 ± 20 %	10.5 ± 20 %	20 ± 20 %
Tripping time of the instantaneous electronic release	ms	Approx. 6 at 12 A	Approx. 6 at 20 A	Approx. 6 at 40 A
Internal resistance				
• In cold state	Ω	> 0.25 ± 6.5%		
• In heated state	Ω	> 0.30 ± 6.5%		
Shock resistance according to IEC 60068-2-27	g/ms	15		
Degree of protection IP on the front according to IEC 60529		IP20		
Touch protection on the front according to IEC 60529		Finger-safe for vertical touching from the front		
Endurance				
• Mechanical	Operating cycles	10 000		
• Electrical	Operating cycles	10 000		
Permissible mounting position		Any		

Conductor cross-sections of main circuit		3RV1611-1AG14	3RV1611-1CG14	3RV1611-1DG14
Type		3RV1611-1AG14	3RV1611-1CG14	3RV1611-1DG14
Connection type		Screw terminals		
Terminal screw		Pozidriv size 2		
Conductor cross-sections (min./max.) , one or two conductors can be connected				
• Solid or stranded	mm ²	2 x (0.5 ... 1.5) ¹⁾ , 2 x (0.75 ... 2.5) ¹⁾ , 2 x (1 ... 4)		
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5) ¹⁾ , 2 x (0.75 ... 2.5) ¹⁾		
Auxiliary switches for blocking the distance protection		1 CO (for use as 1 NO or 1 NC)		
With defined lateral assignment for blocking distance protection				
Rated operational voltage U_e	Alternating voltage	V	125	
Rated operational current $I_e/AC-14$	at $U_e = 125$ V	A	0.1	
Rated operational voltage U_e	Direct voltage L/R 200 ms	V	60	
Rated operational current $I_e/DC-13$	at $U_e = 60$ V	A	0.3	
Minimum load capacity	V mA	5 1		
Short-circuit protection for auxiliary circuit		250 V type FF 2A (prospective short-circuit current < 1.1 kA)		
Melting fuse	A			

¹⁾ If two different conductor cross-sections are connected to one clamping point, both cross-sections must be in the range specified.

¹⁾ Guide value for 4-pole standard motors at 50 Hz 400 V AC. The actual starting and rated data of the motor to be protected must be considered when selecting the units.

²⁾ The 3RV2111-....-0BA0 motor starter protectors have a mechanical endurance of 500 operating cycles.

³⁾ The motor starter protectors do not have UL/CSA approval and are not certified either according to the European Explosion Protection Directive ATEX or according to the International Explosion Protection Standard (IECEx).

Auxiliary switches and other accessories can be ordered separately (see page 7/47 onwards).

¹⁾ Guide value for 4-pole standard motors at 50 Hz 400 V AC. The actual starting and rated data of the motor to be protected must be considered when selecting the units.

²⁾ Suitable for use with IE3 and IE4 motors up to a starting current of 256 A. For higher starting currents we recommend using 3RV2 motor starter protectors size S2.

³⁾ The devices must not be mounted side-by-side and they must not be assembled with link modules with contactors. A lateral clearance of 9 mm is required. For use with IE3 and IE4 motors we recommend using 3RV2 motor starter protectors size S2.

⁴⁾ The 3RV2021-.....0BA0 motor starter protectors have a mechanical endurance of 500 operating cycles.

⁵⁾ The motor starter protectors do not have UL/CSA approval and are not certified either according to the European Explosion Protection Directive ATEX or according to the International Explosion Protection Standard (IECEx).

Auxiliary switches and other accessories can be ordered separately (see page 7/47 onwards).

¹⁾ Guide value for 4-pole standard motors at 50 Hz 400 V AC. The actual starting and rated data of the motor to be protected must be considered when selecting the units.

²⁾ The 3RV2031-....-0BA0 motor starter protectors have a mechanical endurance of 250 operating cycles.

³⁾ The motor starter protectors do not have UL/CSA approval and are not certified either according to the European Explosion Protection Directive ATEX or according to the International Explosion Protection Standard (IECEx).

⁴⁾ Suitable for use with IE3 and IE4 motors up to a starting current of 780 A. For higher starting currents we recommend using 3VA circuit breakers (see Catalog LV 10).

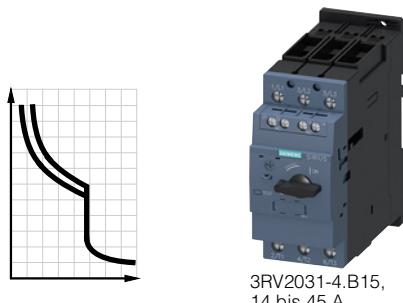

Auxiliary switches and other accessories can be ordered separately (see page 7/47 onwards).

¹⁾ Guide value for 4-pole standard motors at 50 Hz 400 V AC. The actual starting and rated data of the motor to be protected must be considered when selecting the units.

²⁾ For overload protection of the motors, appropriate overload relays must be used.

³⁾ Suitable for use with IE3 and IE4 motors up to a starting current of 720 A. For higher starting currents we recommend using 3RV2 motor starter protectors size S3.

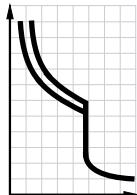

⁴⁾ Suitable for use with IE3 and IE4 motors up to a starting current of 780 A. For higher starting currents we recommend using 3VA circuit breakers (see Catalog LV 10).

Auxiliary switches and other accessories can be ordered separately (see page 7/47 onwards).

Protection equipment

Motor starter protectors/circuit breakers

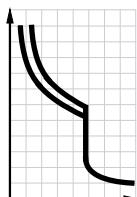

SIRIUS 3RV2 motor starter protectors/circuit breakers

Accessories > Mountable accessories

Overview

Mounting location and function

The 3RV2 motor starter protectors/circuit breakers have three main contact elements. In order to achieve maximum flexibility, auxiliary switches, signaling switches, wireless auxiliary and signaling switches, auxiliary releases and isolator modules can be supplied separately.

These components are easily fitted to the switches without the use of any tools according to requirements.

Overview graphic, see page 7/5.

Front side

Notes:

- A maximum of four auxiliary contacts with auxiliary switches can be mounted on each motor starter protector/circuit breaker.
- Transverse auxiliary switches cannot be used for 3RV2742 circuit breaker (size S3).

Transverse auxiliary switch, solid-state-compatible transverse auxiliary switch

1 NO + 1 NC or
2 NO or
1 CO

An auxiliary switch can be inserted transversely on the front. The overall width of the motor starter protectors/circuit breakers remains unchanged.

Left-hand side

Notes:

- A maximum of four auxiliary contacts with auxiliary switches can be mounted on each motor starter protector/circuit breaker.
- The lateral auxiliary switch (two contacts) and the signaling switch can be mounted separately or together.
- It is not possible to mount the lateral auxiliary switch (two contacts) together with the wireless auxiliary and signaling switch.
- The signaling switch and the wireless auxiliary and signaling switch cannot be used for 3RV1011, 3RV27 and 3RV28 circuit breakers.
- Only lateral auxiliary switches can be used for 3RV2742 (size S3).

Lateral auxiliary switch (two contacts)

1 NO + 1 NC or
2 NO or
2 NC

One of the three lateral auxiliary switches can be mounted on the left side per motor starter protector/circuit breaker. The contacts of the auxiliary switch close and open together with the main contacts of the motor starter protector/circuit breaker. Width: 9 mm

Lateral auxiliary switch (four contacts)

2 NO + 2 NC

One lateral auxiliary switch with four contacts can be mounted on the left side per motor starter protector/circuit breaker. The contacts of the auxiliary switch close and open together with the main contacts of the motor starter protector/circuit breaker. Width: 18 mm

Signaling switch

Tripping 1 NO + 1 NC
Short circuit 1 NO + 1 NC

One signaling switch can be mounted on the left side of each motor starter protector.

The signaling switch has two contact systems.

- One contact system always signals tripping irrespective of whether this was caused by a short circuit, an overload or an auxiliary release.
- The other contact system only switches in the event of a short circuit. There is no signaling as a result of switching off with the actuator.

In order to be able to switch on the motor starter protector again after a short circuit, the signaling switch must be reset manually after the error cause has been eliminated. Width: 18 mm

3RV2 COM wireless auxiliary and signaling switch

One wireless auxiliary and signaling switch can be mounted on the left side of each motor starter protector.

It acquires the switching states of the motor starter protector in addition to the number of disconnections. In addition to the ON/OFF state, it differentiates whether tripping has been caused by an overload or a short circuit. The motor starter protector states are transmitted wirelessly by means of the integrated communication function.

The wireless auxiliary and signaling switch requires a 24 V DC supply voltage. Width: 18 mm

Right-hand side

Notes:

- One auxiliary release can be mounted per motor starter protector/circuit breaker.
- Accessories cannot be mounted on the right-hand side of the 3RV21 motor starter protectors for motor protection with overload relay function.

Auxiliary releases

Shunt release

For remote-controlled tripping of the motor starter protector/circuit breaker. The release coil should only be energized for short periods (circuit diagrams to be observed).

or

Undervoltage release

Trips the motor starter protector/circuit breaker when the voltage is interrupted and prevents the motor from being restarted accidentally when the voltage is restored. Used for remote-controlled tripping of the motor starter protector/circuit breaker.

Particularly suitable for EMERGENCY OFF disconnection by way of corresponding EMERGENCY OFF pushbuttons according to IEC 60204-1.

or

Undervoltage release with leading auxiliary contacts
2 NO

Own version for 3RV1011

Function and use as for the undervoltage release without leading auxiliary contacts, but with the following additional function: the auxiliary contacts will open in switch position OFF to deenergize the coil of the undervoltage release, thus interrupting energy consumption. In the "tripped" position, these auxiliary contacts are not guaranteed to open. The leading contacts permit the motor starter protector/circuit breaker to reclose.

Width of auxiliary releases: 18 mm

Top

Notes:

- The isolator module cannot be used for 3RV1011, 3RV27 and 3RV28 circuit breakers.
- The isolator module for size S2 can be used only with 3RV2 motor starter protectors/circuit breakers up to max. 65 A.
- The isolator module cannot be used with the transverse auxiliary switch.

Isolator module

The isolator module can be mounted to the upper connection side of the motor starter protectors.

The supply cable is connected to the motor starter protector through the isolator module.

The plug can only be unplugged when the motor starter protector is open and isolates all 3 poles of the motor starter protector from the network. The shock-protected isolation point is clearly visible and secured with a padlock to prevent reinsertion of the plug.

For a complete overview of which accessories can be used for the various motor starter protectors/circuit breakers, see page 7/2.

¹⁾ The voltage range is valid for 100% (infinite) ON period. The response voltage lies at 0.9 of the lower limit of the voltage range.

²⁾ The voltage range is valid for 5 s ON period at 50/60 Hz AC and DC. The response voltage lies at 0.85 of the lower limit of the voltage range.

³⁾ One auxiliary release can be mounted on the right per motor starter protector/circuit breaker (does not apply to 3RV21 motor starter protectors/circuit breakers with overload relay function).

⁴⁾ Not for 3RV1011 motor starter protectors.

Protection equipment

Motor starter protectors/circuit breakers SIRIUS 3RV2 motor starter protectors/circuit breakers

Accessories > Busbar accessories

Overview

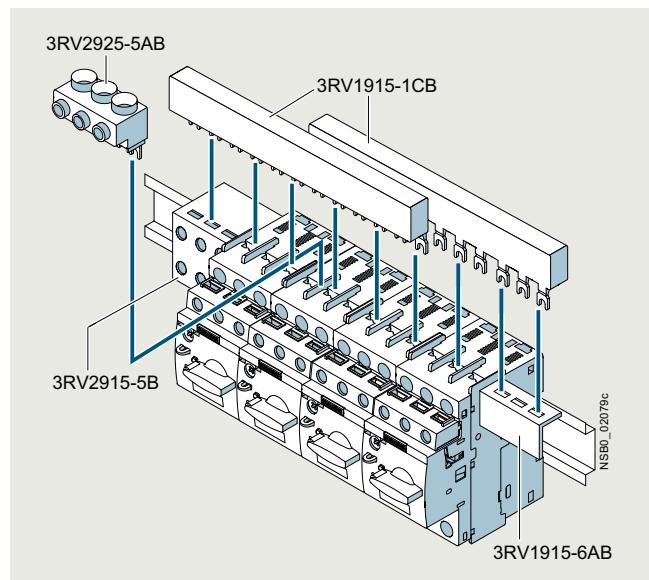

Insulated 3-phase busbar system

3-phase busbar systems provide an easy, time-saving and clearly arranged means of feeding 3RV2 motor starter protectors/circuit breakers with screw terminals. Different versions are available for sizes S00 to S2 and can be used for the various different types of motor starter protectors/circuit breakers (size S0 up to 32 A).

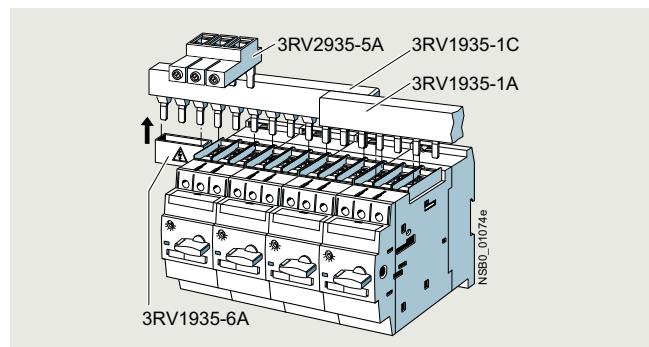

The 3RV1915 3-phase busbar systems are generally unsuitable for the 3RV21 motor starter protectors with sizes S00 and S0 for motor protection with overload relay function.

The busbars are suitable for between two and five motor starter protectors/circuit breakers. However, any kind of extension is possible by clamping the connection tags of an additional busbar (rotated by 180°) underneath the terminals of the respective last motor starter protector/circuit breaker.

A combination of motor starter protectors/circuit breakers of size S00 and S0 is possible. The motor starter protectors/circuit breakers are supplied by appropriate infeed terminals.

SIRIUS 3-phase busbar system size S00/S0

SIRIUS 3-phase busbar system size S2

The 3-phase busbar systems are finger-safe. They are designed for any short-circuit stress which can occur at the output side of connected motor starter protectors/circuit breakers.

The 3-phase busbar systems can also be used to construct "Starters (Type E)" according to UL/CSA and for 3RV27 and 3RV28 circuit breakers according to UL 489. However, special infeed terminals, 3RV2925-5EB for sizes S00/S0 and 3RV2935-5E for size S2, must be used for this purpose, see page 7/51.

8US busbar adapters for 60 mm systems

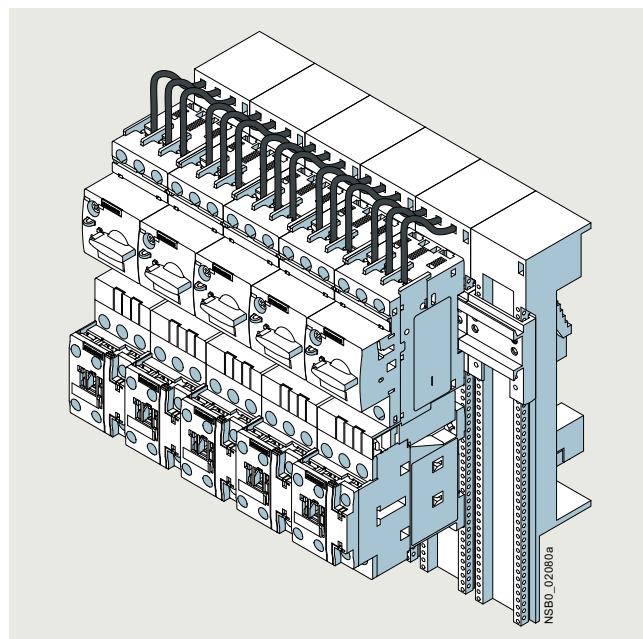

The motor starter protectors/circuit breakers are mounted directly with the aid of busbar adapters on busbar systems with 60 mm center-to-center clearance in order to save space and to reduce infeed times and costs.

Busbar adapters for busbar systems with 60 mm center-to-center clearance are suitable for copper busbars with a width of 12 mm to 30 mm. The busbars can be 5 mm or 10 mm thick.

The motor starter protectors/circuit breakers are snapped onto the adapter and connected on the line side, either with wires or with the plug-in connectors of the SIRIUS infeed system (see page 7/53). This prepared unit is then plugged directly onto the busbar system, and is thus connected both mechanically and electrically at the same time.

For the setup of UL feeders (Type E and F), Type E terminal blocks or phase barriers must be fitted to the infeed module on the motor starter protector (see from page 7/57).

For further busbar adapters for snap-mounting direct-on-line starters and reversing starters as well as additional accessories such as line terminals and outgoing terminals, flat copper profile, etc., see Catalog LV 10.

1) Not for 3RV1011 motor starter protectors.

2) For the setup of UL feeders (Type E and F), Type E terminal blocks or phase barriers (for sizes S00 to S2) must be fitted to the infeed module on the motor starter protector (see from page 7/57).

3) Also approved for 3RV27, 3RV28 motor starter protectors according to UL.

4) For the assembly of feeders for reversing starters comprising a motor starter protector and two contactors.

5) Values according to UL/CSA:

- Rated current: 70 A at 600 V AC
- Short-circuit breaking capacity:
480 V AC: 65 kA, up to $I_h = 30$ A,
480 Y/277 V AC: 65 kA,
600 Y/347 V AC: 20 kA.

6) It is not possible to set up UL feeders (Type E and F).

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

Accessories > Rotary operating mechanisms

Overview

Door-coupling rotary operating mechanisms

Motor starter protectors/circuit breakers with a rotary operating mechanism can be mounted in a control cabinet and operated externally by means of a door-coupling rotary operating mechanism. When the cabinet door with motor starter protector/circuit breaker is closed, the operating mechanism is coupled. When the motor starter protector/circuit breaker closes, the coupling is locked which prevents the door from being opened unintentionally. This interlock can be defeated by the maintenance personnel. In the OFF position, the rotary operating mechanism can be secured against reclosing with up to three padlocks. Inadvertent opening of the door is not possible in this case either.

With the optional 3RV2926-.Q tolerance compensation, an offset can be compensated when installing the door-coupling rotary operating mechanism. For this purpose, the standard coupling head on the shaft is removed and replaced by the tolerance compensation.

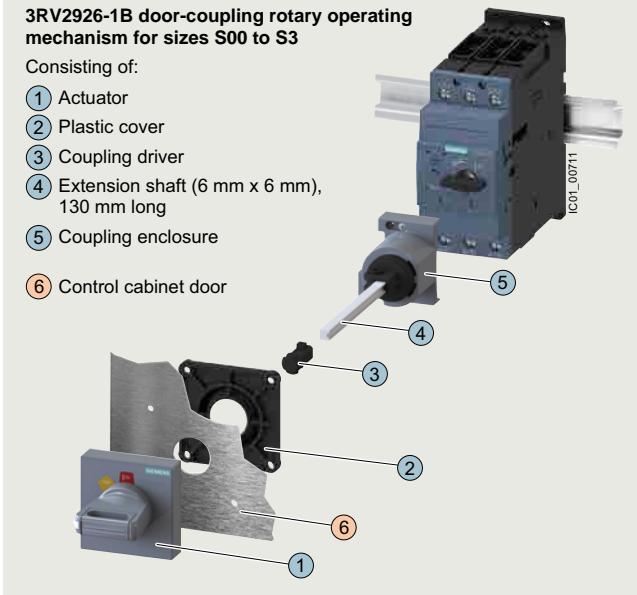

Video: SIRIUS door-coupling rotary operating mechanism

3RV2926-1B door-coupling rotary operating mechanism for sizes S00 to S3

Consisting of:

- ① Actuator
- ② Plastic cover
- ③ Coupling driver
- ④ Extension shaft (6 mm x 6 mm), 130 mm long
- ⑤ Coupling enclosure
- ⑥ Control cabinet door

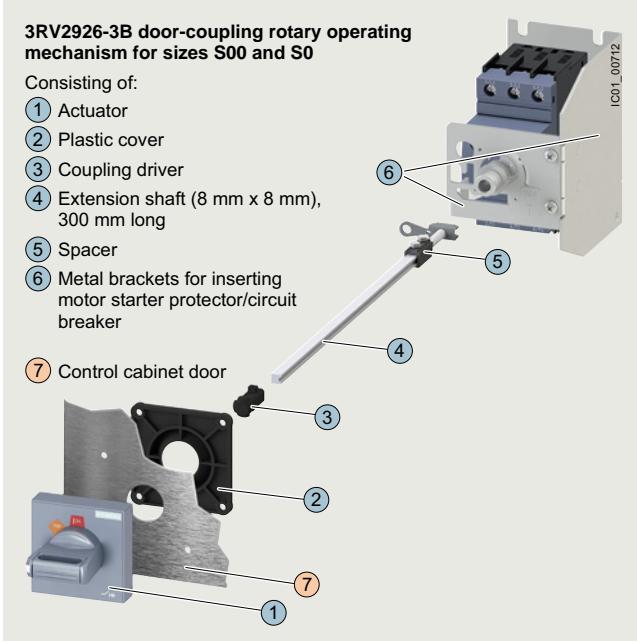

SIRIUS 3RV2926-1B door-coupling rotary operating mechanism

3RV2926-3B door-coupling rotary operating mechanism for sizes S00 and S0

Accessories > Rotary operating mechanisms

Door-coupling rotary operating mechanism for mounting one main switch in size S3 according to UL 508A and NFPA 79

For the installation of a door-coupling rotary operating mechanism for harsh conditions for a main switch (only possible in frame size S3) in a UL control cabinet (according to UL 508A and NFPA 79), the standard stipulates a second handle in the control cabinet. With the cabinet door open, it shall only be possible to switch on this supplementary handle by means of a "deliberate action".

The following figure shows the setup required for this purpose, with the 3RV2946-3C door-coupling rotary operating mechanism for harsh conditions, the 3RV2926-0P shaft support, and the 3VA9137-0GC05 supplementary handle (EMERGENCY OFF version).

To switch on the supplementary handle, the handle must be pressed against a spring in the direction of the mounting plane. This is the required "deliberate action" so that the supplementary handle does not turn empty and the circuit breaker can be closed.

3RV2946-3C EMERGENCY OFF door-coupling rotary operating mechanism for size S3

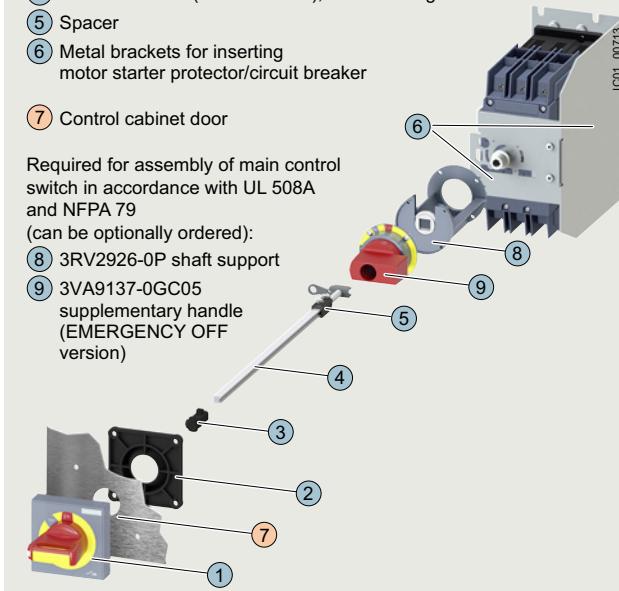

Consisting of:

- ① Actuator
- ② Plastic cover
- ③ Coupling driver
- ④ Extension shaft (8 mm x 8 mm), 300 mm long
- ⑤ Spacer
- ⑥ Metal brackets for inserting motor starter protector/circuit breaker
- ⑦ Control cabinet door

Required for assembly of main control switch in accordance with UL 508A and NFPA 79

(can be optionally ordered):

- ⑧ 3RV2926-0P shaft support
- ⑨ 3VA9137-0GC05 supplementary handle (EMERGENCY OFF version)

SIRIUS 3RV2946-3C EMERGENCY OFF door-coupling rotary operating mechanism for harsh operating conditions according to UL 508A and NFPA 79 with optional shaft support and supplementary handle (EMERGENCY OFF version)

			mm	Size							
Door-coupling rotary operating mechanisms for harsh conditions											
	3RV2946-3B	The door-coupling rotary operating mechanisms consist of a selector, a coupling driver, an extension shaft of 300 mm in length (8 mm x 8 mm), a spacer and two metal brackets into which the motor starter protector/circuit breaker is inserted. The door-coupling rotary operating mechanisms are designed to degree of protection IP65. For UL/CSA applications, they are tested for enclosure types 1, 3R and 12. The door interlocking reliably prevents opening of the control cabinet door in the ON position of the motor starter protector/circuit breaker. The OFF position can be locked with up to three padlocks. Laterally mountable auxiliary releases and 2-pole auxiliary switches can be used. The door-coupling rotary operating mechanisms thus meet the requirements for isolating functions according to IEC 60947-2. With the optional 3RV2926-2Q tolerance compensation, an offset can be compensated when installing the door-coupling rotary operating mechanism for harsh conditions. Accessories for "Self-Protected Combination Motor Controllers (Type E)" according to UL 508/UL 60947-4-1

The 3RV20 motor starter protectors with screw terminals are approved according to UL 508/UL 60947-4-1 as "Self-Protected Combination Motor Controllers (Type E)". The 3RV1011 motor starter protectors do not have this UL approval.

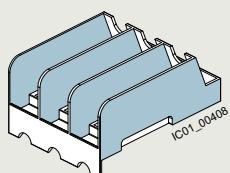

This requires increased clearance and creepage distances (1 inch and 2 inches respectively) at the input side of the device, which are achieved by mounting a terminal block or a phase barrier. No transverse auxiliary switches may be used when using 3RT2946-4GA07 terminal blocks for size S3.

SIRIUS 3RV2928-1H terminal block

3RV204.	S3	3RT2946-4GA07 terminal block

-- No accessories needed

Special 3-phase infeed terminals are required for constructing "Starters (Type E)" with an insulated 3-phase busbar system (see "Busbar accessories", page 7/51).

For the setup of "Starters (Type E)" with 8US busbar adapters, Type E terminal blocks or phase barriers (for sizes S00 to S2) must be fitted to the infeed module on the motor starter protector/circuit breaker, see page 7/60.

The 3RV29 infeed system also enables the assembly of "Starters (Type E)", see page 7/67 onwards.

Note:

According to CSA, these terminal blocks and the phase barriers can be omitted when the device is used as a "Self-Protected Combination Motor Controller (Type E)".

3RT2946-4GA07

3RV2928-1K

3RV2938-1K

Note:

UL 508/UL 60947-4-1 approval demands 1-inch clearance and 2-inch creepage distances for "Self-Protected Combination Motor Controllers (Type E)". The following terminal blocks or phase barriers must be used for the 3RV20 motor starter protectors with screw terminals. This also applies to construction with the 8US busbar adapter. 3RV20 motor starter protectors with spring-loaded terminals must be assembled with the 3RV29 infeed system for approval as "Self-Protected Combination Motor Controllers (Type E)" according to UL 508/UL 60947-4-1. The 3RV1011 motor starter protectors do not have UL approval as Type E starters.

The terminal block or phase barriers cannot be used in combination with the 3RV19.5 3-phase busbars.

For construction with 3-phase busbars, see "Busbar accessories", page 7/49 onwards.

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

Accessories > Enclosures and front plates

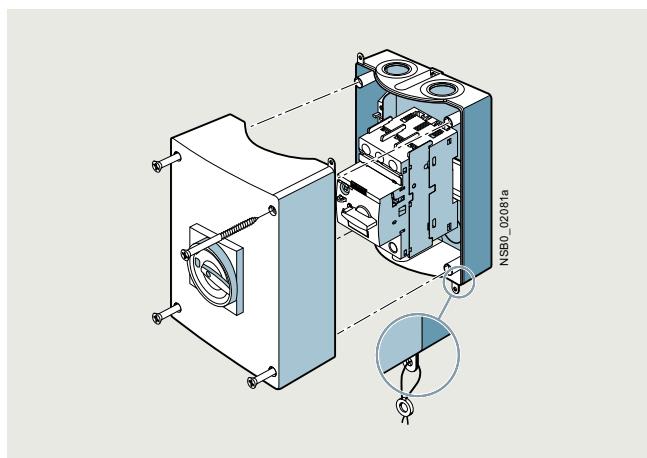

Overview

Enclosures

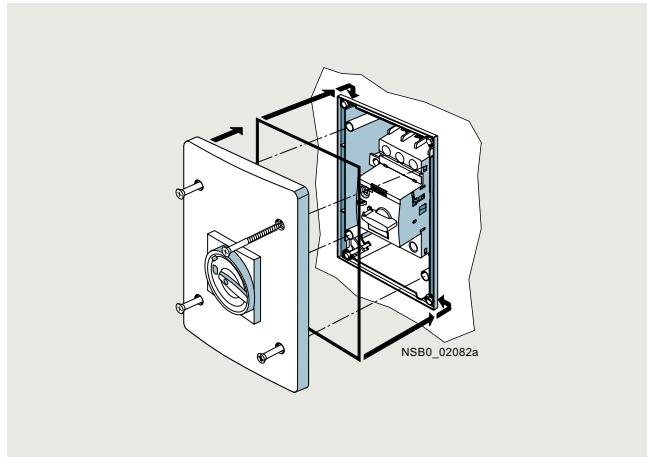

For the stand-alone installation of 3RV20 to 3RV24 motor starter protectors size S00 ($I_{n\ max} = 16\ A$), S0 ($I_{n\ max} = 32\ A$), S2 ($I_{n\ max} = 65\ A$), and for 3RV1011 motor starter protectors, molded-plastic and cast aluminum enclosures for surface mounting and molded-plastic enclosures for flush mounting are available in various dimensions.

When installed in a molded-plastic enclosure, the motor starter protectors have a rated operational voltage U_e of 500 V.

The enclosures for surface mounting have the degree of protection IP55; the enclosures for flush mounting also comply with the degree of protection IP55 on the front. The cast aluminum enclosures for surface mounting achieve degree of protection IP65.

Enclosures for surface mounting

Enclosures for flush mounting (only for sizes S00 and S0)

There are two knock-out cable entries for cable glands at the top and two at the bottom; also on the rear corresponding cable entries are scored. There is a knockout on the top of the enclosure for indicator lights that are available as accessories.

The narrow enclosure can accommodate a motor starter protector without accessories, with transverse auxiliary switch and with lateral auxiliary switch. There is no provision for installing a motor starter protector with a signaling switch or wireless auxiliary and signaling switch.

With size S00 to S2 3RV2 circuit breakers, the molded-plastic enclosures are equipped with a rotary operating mechanism.

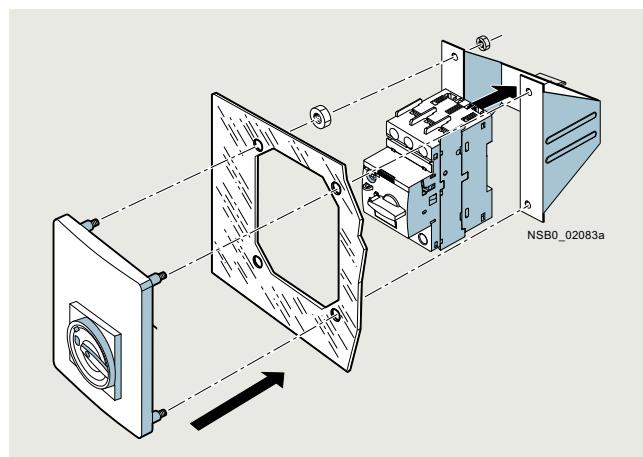

The enclosures can be supplied with either a black rotary operating mechanism or with an EMERGENCY OFF rotary operating mechanism with a red/yellow knob.

In the OFF position, all rotary operating mechanisms can be locked with up to three padlocks. These enclosures are not suitable for 3RV1011 motor starter protectors.

Front plates

Motor starter protectors are frequently required to be actuated in any enclosure. Front plates equipped with a rotary operating mechanism for 3RV20 to 3RV24 motor starter protectors sizes S00 to S3 are available for this purpose.

A holder for the motor starter protectors sizes S00 and S0, into which the motor starter protectors can be snapped, is available for the front plates. It is not possible to use a signaling switch, a wireless auxiliary and signaling switch or a 4-pole auxiliary switch. The front plates are not suitable for 3RV1011 motor starter protectors.

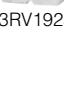

Front plate (including holder) for sizes S00 and S0

Overview

The 3RV29 infeed system is a convenient means of energy supply and distribution for a group of several motor starter protectors or complete load feeders with screw or spring-loaded terminals in sizes S00 and S0. Motor starter protectors or load feeders with a rated current of maximum 32 A each can be used. 3RV21 motor starter protectors/circuit breakers cannot be used in this system.

The system is based on a basic module complete with a lateral incoming unit (3-phase busbar with infeed). This infeed with spring-loaded terminals is mounted on the right or left, depending on the version, and can be supplied with a maximum conductor cross-section of 25 mm² (with end sleeve). A basic module has two sockets onto each of which a motor starter protector can be snapped.

Expansion modules (3-phase busbars for system expansion) are available for extending the system. The individual modules are connected through an expansion plug.

The electrical connection between the 3-phase busbars and the motor starter protectors is implemented through plug-in connectors. The complete system can be mounted on a TH 35 DIN rail to IEC 60715, and can be expanded as required up to a maximum current-carrying capacity of 63 A.

The system is mounted extremely quickly and easily thanks to the simple plug-in terminals. Thanks to the lateral infeed, the system also saves space in the control cabinet.

The additional height required for the infeed unit is only 30 mm. The alternative infeed possibilities on each side offer a high

degree of flexibility for configuring the control cabinet: Infeed on left-hand or right-hand side as well as infeed on one side and outfeed on the other side to supply further loads are all possible. A terminal block with spring-loaded terminals in combination with a DIN rail enables the integration of not only SIRIUS motor starter protectors but also 1-phase, 2-phase and 3-phase components such as 5SY miniature circuit breakers or SIRIUS relay components.

The 3RV29 infeed system is approved according to IEC 60947-4-1. It is also UL-approved and authorized for "Self-Protected Combination Motor Controllers" starters (Type E), for starters (Type F) (starters (Type E) + contactors) and for circuit breakers according to UL 489 (3RV27/3RV28).

Assembly kits for constructing the infeed system with spring-loaded terminals

The following versions can be ordered:

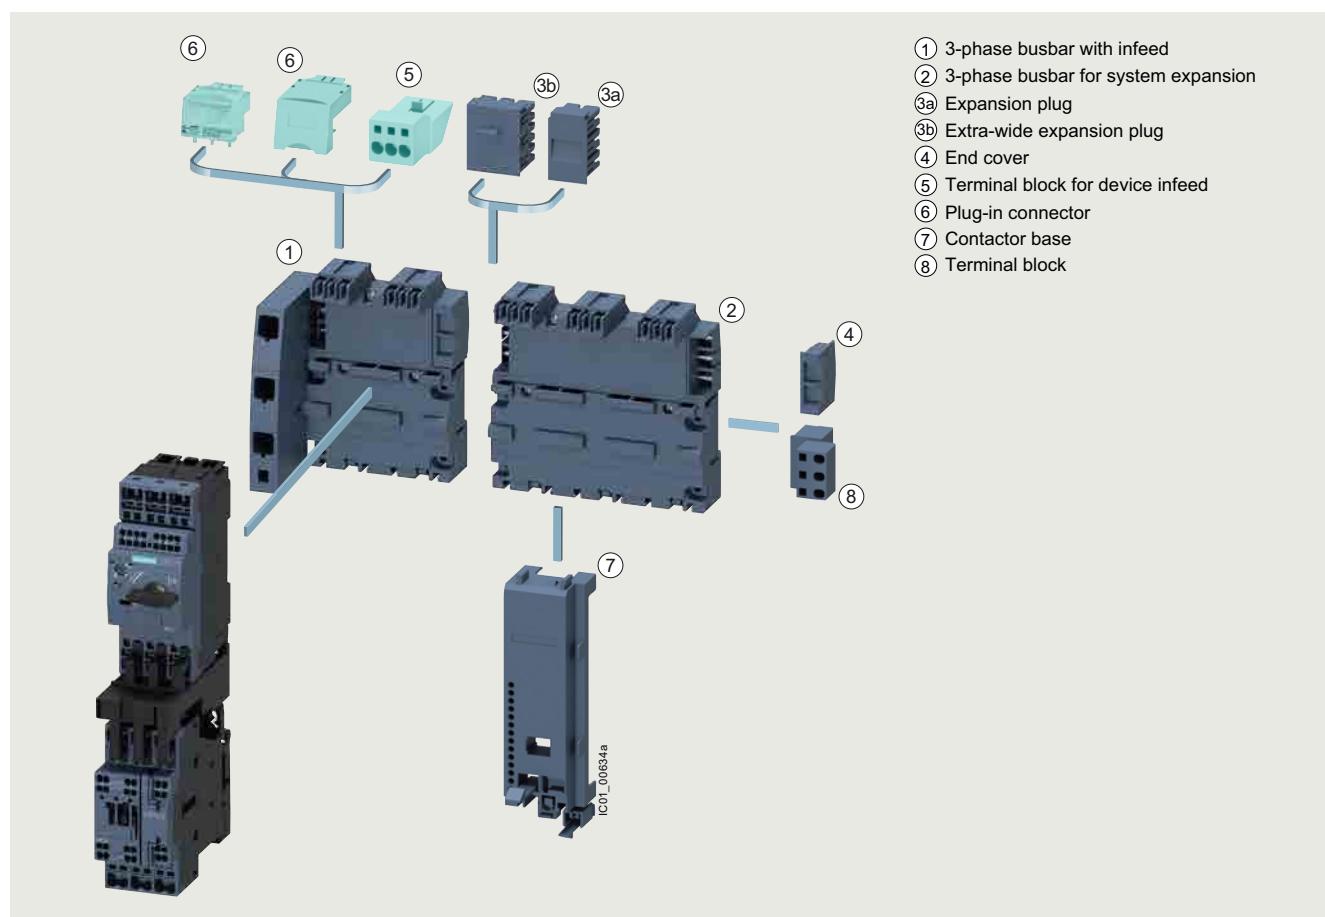

- Basic set for two feeders
- Expansion sets for two or three feeders

The assembly kits contain 3-phase busbars, plug-in connectors and contactor bases (see page 7/72).

Note:

Each set contains plug-in connectors for sizes S00 and S0.

Example: The basic set contains four plug-in connectors (two each for S00 and S0).

SIRIUS 3RV29 infeed system

Protection equipment

Motor starter protectors/circuit breakers

SIRIUS 3RV2 motor starter protectors/circuit breakers

3RV29 infeed system

① 3-phase busbars with infeed

A 3-phase busbar with infeed unit is required for connecting the incoming supply. These modules comprise one infeed module and two sockets which each accept one motor starter protector. A choice of two versions with infeed on the left or right is available. The infeed is connected to spring-loaded terminals. They permit an infeed with conductor cross-sections of up to 25 mm² with end sleeve. An end cover is supplied with each module.

② 3-phase busbars for system expansion

The 3-phase busbars for system expansion support expansion of the system. There is a choice of modules with two or three sockets. The system can be expanded as required up to a maximum current-carrying capacity of 63 A. An expansion plug is supplied with each module.

③a Expansion plug

The expansion plug is used for electrical connection of adjacent 3-phase busbars. The current carrying capacity of this plug equals 63 A. One expansion plug is supplied with each 3-phase busbar for system expansion. Additional expansion plugs are therefore only required as spare parts.

③b Extra-wide expansion plug

The wide expansion plug makes the electrical connection between two 3-phase busbars, thus performing the same function as the 3RV2917-5BA00 expansion plug; the electrical characteristics (e.g. a current carrying capacity of 63 A) are identical.

The 3RV2917-5E expansion plug is 10 mm wider than the 3RV2917-5BA00 expansion plug, hence in the plugged state there is a distance of 10 mm between the connected 3-phase busbars. This distance can be used to lay the auxiliary current and control current wiring ("wiring duct"). The motor starter protector and contactor can be wired from underneath, which means that the complete cable duct above the system can be omitted.

④ End cover

The end cover is used to cover the 3-phase busbar at the open end of the system. This cover is therefore only required once for each system. An end cover is supplied with each 3-phase busbar system with infeed. Further end covers are therefore only required as spare parts.

⑤ Terminal block for device infeed

A new addition to the system is a plug for outfeeding to a device slot within a module. This offers the option not only of connecting 3-phase loads to the system, but also of integrating 1-phase loads into the infeed system.

⑥ Plug-in connector

The plug-in connector is used for the electrical connection between the 3-phase busbar and the 3RV2 or 3RV1011 motor starter protector. These plug-in connectors are available for screw or spring-loaded terminals.

⑦ Contactor base

Load feeders can be assembled in the system using the S00 and S0 contactor base. The contactor bases are suitable for contactors of sizes S00 and S0 with screw and spring-loaded terminals and are simply snapped onto the 3-phase busbars. Direct-on-line starters and reversing starters are possible. One contactor base is required for direct-on-line starters and two are required for reversing starters.

To assemble load feeders for reversing starters, the contactor bases can be arranged alongside each other (90 mm overall width). In this case the mechanical interlocking of the contactors is possible. The S0 contactor bases are also suitable for soft starters size S00 and S0 with screw terminal.

The infeed system is designed for mounting on a TH 35 DIN rail with 7.5 mm overall depth. This DIN rail gives the contactor base a stable mounting surface to sit on. If DIN rails with a depth of 15 mm are used, the spacer connected to the bottom of the contactor base must be knocked out and plugged into the DIN rail mating piece, which is also located on the underside. Then the contactor base also has a stable mounting surface. When DIN rails with a depth of 7.5 mm are used, the spacer has no function and can be removed.

The link modules are used for direct on-line starters, in which case the use of a contactor base is not absolutely necessary. Motor starter protector and contactor assemblies can then be directly snapped onto the sockets of the 3-phase busbars. For feeders of sizes S00 and S0, the corresponding 3RA1921-1..., 3RA2911-2..., 3RA2921-1... or 3RA2921-2... link modules should generally be used.

⑧ Terminal block

The 3RV2917-5D terminal block enables the integration of not only SIRIUS motor starter protectors but also 1-phase, 2-phase and 3-phase components. The three phases can be fed out of the system using the terminal block; which means that 1-phase loads can also be integrated in the system. The terminal block is plugged into the slot of the expansion plug and thus enables outfeeding from the middle or end of the infeed system. The terminal block can be rotated through 180° and be locked to the support modules of the infeed system. In addition, the 45 mm wide TH 35 3RV1917-7B DIN rail option for screwing onto the support plate facilitates plugging the 1-phase, 2-phase and 3-phase components onto the infeed system.

Connection methods**3RU2 thermal overload relays**

- Sizes S00 and S0:
 - Main and auxiliary circuit: Either screw or spring-loaded terminals
- Sizes S2 and S3:
 - Main circuit: Screw terminals with box terminal
 - Auxiliary circuit: Either screw or spring-loaded terminals

3RB3 electronic overload relays

- Sizes S00 and S0:
 - Main and auxiliary circuit: Either screw or spring-loaded terminals
- Sizes S2 and S3:
 - Main circuit: Screw terminals with box terminal or as straight-through transformer
 - Auxiliary circuit: Either screw or spring-loaded terminals

3RB2 electronic overload relays

- Size S6:
 - Main circuit: With busbar connection or as straight-through transformer
 - Auxiliary circuit: Either screw or spring-loaded terminals
- Sizes S10/S12:
 - Main circuit: With busbar connection
 - Auxiliary circuit: Either screw or spring-loaded terminals

Screw terminals

Spring-loaded terminals

Busbar connections

Straight-through transformers

The various terminals and straight-through transformers are indicated in the corresponding tables by the symbols shown on orange backgrounds.

Voltage data

The data for 3-phase power systems according to IEC 60947-4-1 are valid for the following line system configurations:

Voltage U_e	Line system configurations	
	Three-phase four-wire networks	Three-phase three-wire networks
V	V	V
230	--	230
400	230/400	400
440	260/440	440
500	--	500
690	400/690	690 (only as from size S3)
1 000	--	1 000

Mountable accessories for 3RU2 thermal overload relay

Protection equipment

Overload relays

SIRIUS 3RU2 thermal overload relays

- ① Switch position indicator and TEST function of the wiring:
Indicates a trip and enables the wiring test.
- ② Motor current setting:
Setting the device to the rated motor current is easy with the large rotary knob.
- ③ Connecting terminals:
Depending on the device version, the connecting terminals are screw terminals or spring-loaded terminals for the main and auxiliary circuits.
- ④ STOP button:
If the STOP button is pressed, the NC contact is opened. This switches off the contactor downstream. The NC contact is closed again when the button is released.
- ⑤ Selector switch for Manual/Automatic RESET and RESET button:
With this switch you can choose between Manual and Automatic RESET. A device set to Manual RESET can be reset locally by pressing the RESET button. A Remote RESET is possible using the RESET modules (accessories), which are independent of size.
- ⑥ Connection for mounting onto contactors:
Optimally adapted in electrical, mechanical and design terms to the contactors. The overload relay can be connected directly to the contactor using these pins. Stand-alone installation is possible as an alternative (in conjunction with a terminal support for stand-alone installation).

A sealable transparent cover can be optionally mounted (accessory). It secures the motor current setting against adjustment.

3RU2 thermal overload relays up to 100 A have been designed to provide inverse-time delayed protection for loads with normal starting against impermissibly high temperature rises due to overload or phase failure.

An overload or phase failure results in an increase of the motor current beyond the set rated motor current. Via heating elements, this current rise heats up the bimetal strips inside the device which then bend and as a result trigger the auxiliary contacts by means of a tripping mechanism. The auxiliary contacts then switch off the load by means of a contactor. The break time depends on the ratio between the tripping current and the current setting I_e and is stored in the form of a long-term stable tripping characteristic curve, [see Characteristic curves](#).

The "tripped" status is signaled by means of a switch position indicator. The relay is reset manually or automatically after a recovery time has elapsed.

The 3RU2 thermal overload relays are suitable for operation with frequency converters.

The devices are manufactured according to environmental guidelines and contain environmentally friendly and reusable materials. They comply with all important worldwide standards and approvals.

Use in hazardous areas

The 3RU2 overload relays are certified according to both the European Explosion Protection Directive (ATEX) and the International Explosion Protection Standard (IECEx), [see Certificates](#).

SIRIUS 3RU2136-4.B0 thermal overload relay

Protection equipment

Overload relays

SIRIUS 3RU2 thermal overload relays

Benefits

The most important features and benefits of the 3RU2 thermal overload relays are listed in the overview table (see "General data", page 7/76 onwards).

Application

Industries

The 3RU2 thermal overload relays are suitable for customers from all industries who want to guarantee optimum inverse-time delayed protection of their electrical loads (e.g. motors) under normal starting conditions (CLASS 10, 10A).

Application

The 3RU2 thermal overload relays have been designed for the protection of three-phase and single-phase AC and DC motors.

If single-phase AC or DC loads are to be protected by the 3RU2 thermal overload relays, all three bimetal strips must be heated. For this purpose, all main conducting paths of the relay must be connected in series.

Ambient conditions

3RU2 thermal overload relays compensate temperature in the temperature range from -40 °C to +60 °C according to IEC 60947-4-1. At temperatures from +60 to +70 °C, the upper set value of the setting range has to be reduced by a specific factor.

Use of SIRIUS protection devices in conjunction with IE3 and IE4 motors

Note:

For the use of 3RU2 thermal overload relays in conjunction with highly efficient IE3 and IE4 motors, please observe the information on dimensioning and configuring, see Application Manual.

For more information, see page 1/8.

• Alternating current	Yes, frequency range up to 400 Hz					
Current setting	A	0.11 ... 0.16 to 11 ... 16	1.8 ... 2.5 to 34 ... 40	11 ... 16 to 70 ... 80 28 ... 40 to 80 ... 100		
Power loss per unit (max.)	W	4.8 ... 7.5	5.7 ... 9.6	10.5 ... 18.9		
Short-circuit protection						
• With fuse without contactor	See "Selection and ordering data", pages 7/86 ... 7/89					
• With fuse and contactor	"Short-Circuit Protection with Fuses/Motor Starter Protectors for Motor Feeders", see • Digital Configuration Manual for load feeders, • Configuration Manual for load feeders.					
Protective separation between main and auxiliary conducting paths						
according to IEC 60947-1						
• Screw terminals or ring cable lug connections	V	440	690: Setting range $\leq 25 \text{ A}$	690		
• Spring-loaded terminals	V	440	440: Setting range $> 25 \text{ A}$	690		
Auxiliary circuit						
Number of NO contacts	1					
Number of NC contacts	1					
Auxiliary contacts – Assignment	1 NO for the signal "tripped"; 1 NC for disconnecting the contactor					
Rated insulation voltage U_i (pollution degree 3)	V	690				
Rated impulse withstand voltage U_{imp}	kV	6				
Contact rating of the auxiliary contacts						
• NC, NO contacts with alternating current AC-15, rated operational current I_e at U_e						
- 24 V	A	3				
- 120 V	A	3				
- 125 V	A	3				
- 230 V	A	2				
- 400 V	A	1				
- 600 V	A	0.75				
- 690 V	A	0.75				
• NC, NO contacts with direct current DC-13, rated operational current I_e at U_e						
- 24 V	A	1				
- 110 V	A	0.22				
- 125 V	A	0.22				
- 220 V	A	0.11				
• Contact reliability (suitability for PLC control; 17 V, 5 mA)	Yes					
Short-circuit protection						
• With fuse						
- Operational class gG	A	6				
- Quick	A	10				
• With miniature circuit breaker (C characteristic)	A	6 (up to $I_k \leq 0.5 \text{ kA}; U \leq 260 \text{ V}$)				
Reliable operational voltage for protective separation between auxiliary conducting paths	V	440				
according to IEC 60947-1						
CSA, UL and UR rated data						
Auxiliary circuit – Switching capacity	B600, R300					

SIRIUS 3RU2 thermal overload relays

Type	3RU2116	3RU2126	3RU2136	3RU2146
Size	S00	S0	S2	S3
Conductor cross-sections of main circuit				
Connection type		 Screw terminals		 Screw terminals with box terminal
Terminal screw	M3, Pozidriv size 2	M4, Pozidriv size 2	M6, Pozidriv size 2	4 mm Allen screw
Operating devices	mm	Ø 5 ... 6	Ø 5 ... 6	4 mm Allen screw
Prescribed tightening torque	Nm	0.8 ... 1.2	2 ... 2.5	3 ... 4.5
Conductor cross-sections (min./max.), one or two conductors can be connected				
• Solid or stranded	mm ²	2 x (0.5 ... 1.5) ¹⁾ , 2 x (0.75 ... 2.5) ¹⁾ , max. 2 x 4	2 x (1 ... 2.5) ¹⁾ , 2 x (2.5 ... 10) ¹⁾	2 x (1 ... 35) ¹⁾ , 1 x (1 ... 50) ¹⁾
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5) ¹⁾ , 2 x (0.75 ... 2.5) ¹⁾	2 x (1 ... 2.5) ¹⁾ , 2 x (2.5 ... 6) ¹⁾ , max. 1 x 10	2 x (1 ... 25) ¹⁾ , 1 x (1 ... 35) ¹⁾
• AWG cables, solid or stranded	AWG	2 x (20 ... 16) ¹⁾ , 2 x (18 ... 14) ¹⁾ , 2 x 12	2 x (16 ... 12) ¹⁾ , 2 x (14 ... 8) ¹⁾	2 x (18 ... 2) ¹⁾ , 1 x (18 ... 1) ¹⁾
Removable box terminals²⁾				
• With copper bars ³⁾	mm	--	--	2 x 12 x 4
• With cable lugs ⁴⁾				
- Terminal screw		--	--	M6
- Prescribed tightening torque	Nm	--	--	4.5 ... 6
- Usable ring cable lugs	mm	--	--	d ₂ = min. 6.3 d ₃ = max. 19
 Spring-loaded terminals				
Connection type				
Operating devices	mm	3.0 x 0.5 and 3.5 x 0.5		
Conductor cross-sections (min./max.), one conductor can be connected				
• Solid or stranded	mm ²	1 x (0.5 ... 4)	1 x (1 ... 10)	--
• Finely stranded without end sleeve	mm ²	1 x (0.5 ... 2.5)	1 x (1 ... 6)	--
• Finely stranded with end sleeve (DIN 46228)	mm ²	1 x (0.5 ... 2.5)	1 x (1 ... 6)	--
• AWG cables, solid or stranded	AWG	1 x (20 ... 12)	1 x (18 ... 8)	--
• Max. outer diameter of the conductor insulation	mm	3.6	6.4	--
Conductor cross-sections for auxiliary circuit				
Connection type				
Terminal screw	 Screw terminals			
Operating devices	mm	M3, Pozidriv size 2		
Prescribed tightening torque	Nm	Ø 5 ... 6		
Conductor cross-sections (min./max.), one or two conductors can be connected				
• Solid or stranded	mm ²	2 x (0.5 ... 1.5) ¹⁾ , 2 x (0.75 ... 2.5) ¹⁾		
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5) ¹⁾ , 2 x (0.75 ... 2.5) ¹⁾		
• AWG cables, solid or stranded	AWG	2 x (20 ... 16) ¹⁾ , 2 x (18 ... 14) ¹⁾		
 Spring-loaded terminals				
Operating devices	mm	3.0 x 0.5 and 3.5 x 0.5		
Conductor cross-sections (min./max.), one or two conductors can be connected				
• Solid or stranded	mm ²	2 x (0.5 ... 2.5)		
• Finely stranded without end sleeve	mm ²	2 x (0.5 ... 2.5)		
• Finely stranded with end sleeve (DIN 46228)	mm ²	2 x (0.5 ... 1.5)		
• AWG cables, solid or stranded	AWG	2 x (20 ... 14)		
• Max. outer diameter of the conductor insulation	mm	3.6		

¹⁾ If two different conductor cross-sections are connected to one clamping point, both cross-sections must be in the range specified.

²⁾ Cable lug and busbar connection possible after removing the box terminals.

³⁾ If bars larger than 12 mm x 10 mm are connected, a 3RT2946-4EA2 cover is needed to maintain the required phase clearance, see page 7/105.

⁴⁾ If conductors larger than 25 mm² are connected, the 3RT2946-4EA2 cover is needed to maintain the required phase clearance, see page 7/105.

Protection equipment

Overload relays

SIRIUS 3RU2 thermal overload relays **IE3/IE4 ready**

Selection and ordering data

3RU2 thermal overload relays for mounting on contactor¹⁾, sizes S00 and S0, CLASS 10

Features and technical specifications:

- Connection methods
Main and auxiliary circuit: Either screw or spring-loaded terminals
- Overload and phase failure protection
- Auxiliary contacts 1 NO + 1 NC
- Manual and Automatic RESET
- Switch position indicator

- TEST function
 - STOP button
 - Sealable covers (optional accessory)

Mountable accessories for 3RB3 and 3RB2 electronic overload relays (see pages 7/104 to 7/106)

SIRIUS 3RB electronic overload relays

- ① 3RB3133-4.B0 overload relay, size S2
- ② 3RB2153-4FW2 overload relay, size S6
- ③ Switch position indicator and TEST function of the wiring:
Indicates a trip and enables the wiring test.
- ④ Trip class setting/internal ground-fault detection
(only 3RB31 and 3RB21):
Using the rotary switch you can set the required trip class and activate the internal ground-fault detection dependent on the starting conditions.
- ⑤ Solid-state test (device test):
Enables a test of all important device components and functions.
- ⑥ Connecting terminals (removable terminal block for auxiliary circuits):
Depending on the device version, the connecting terminals are screw terminals or spring-loaded terminals for the main and auxiliary circuits.
- ⑦ Selector switch for Manual/Automatic RESET:
With the slide switch you can choose between Manual and Automatic RESET.

- ⑧ Motor current setting:
Setting the device to the rated motor current is easy with the large rotary knob.
- ⑨ A device set to Manual RESET can be reset locally by pressing the RESET button. On 3RB31 and 3RB21 overload relays an electrical Remote RESET is integrated.
- ⑩ Connection for mounting onto contactors:
Optimally adapted in electrical, mechanical and design terms to the 3RT contactors. The overload relay can be connected directly using these connection pins. Stand-alone installation is possible as an alternative (in conjunction with a terminal support for stand-alone installation).

A sealable transparent cover can be optionally mounted (accessory). It secures the motor current setting against adjustment.

3RB3 and 3RB2 electronic overload relays

The 3RB3 electronic overload relays up to 115 A and the 3RB2 electronic overload relays up to 630 A with internal power supply have been designed for inverse-time delayed protection of loads with normal and heavy starting (see [Equipment Manual](#)) against excessive temperature rises due to overload, phase asymmetry or phase failure.

An overload, phase asymmetry or phase failure result in an increase of the motor current beyond the set rated motor current. This current rise is detected by the current transformers integrated into the devices and evaluated by corresponding solid-state circuits which then output a pulse to the auxiliary contacts. The auxiliary contacts then switch off the load by means of a contactor. The break time depends on the ratio between the tripping current and the current setting I_e and is stored in the form of a long-term stable tripping characteristic curve, see [Characteristics](#).

In addition to inverse-time delayed protection of loads against excessive temperature rises due to overload, phase asymmetry and phase failure, the 3RB31 and 3RB21 electronic overload relays also allow internal ground-fault detection (not possible in conjunction with contactor assemblies for star-delta (wye-delta) starting). This provides protection of loads against incomplete ground faults due to damage to the insulation material, moisture, condensed water, etc.

The "tripped" status is signaled by means of a switch position indicator. The relay is reset manually or automatically after the recovery time has elapsed.

The 3RB3 and 3RB2 electronic overload relays are suitable for operation with frequency converters, see [Equipment Manual](#).

The devices are manufactured according to environmental guidelines and contain environmentally friendly and reusable materials. They comply with all important worldwide standards and approvals.

Use in hazardous areas

The 3RB electronic overload relays are suitable for the overload protection of motors with the following types of protection:

- $\text{Ex II (2) G [Ex e] [Ex d] [Ex px]}$
- $\text{Ex II (2) D [Ex t] [Ex p]}$

EC type-examination certificate for Group II, Category (2) G/D exists:

- PTB 09 ATEX 3001 for 3RB3
- PTB 06 ATEX 3001 for 3RB2

Product versions	Article number
Electronic overload relays	3RB3 □ □ □ – □ □ □ Sizes S00 to S3 3RB2 □ □ □ – □ □ □ Sizes S6 and S10/S12, 14
Device type	e.g. 0 = standard device, with internal supply, for three-phase loads <input checked="" type="checkbox"/>
Size, rated operational current and power	e.g. 1 = 16 A (7.5 kW) for size S00 <input checked="" type="checkbox"/>
Version of the Automatic RESET, electrical Remote RESET	e.g. 6 = switchable between Manual/Automatic RESET <input checked="" type="checkbox"/>
Trip class (CLASS)	e.g. 1 = CLASS 10E <input checked="" type="checkbox"/>
Setting range of the overload release	e.g. R = 0.1 ... 0.4 A <input checked="" type="checkbox"/>
Connection methods	e.g. B = screw terminals for main and auxiliary circuits <input checked="" type="checkbox"/>
Installation type	e.g. 0 = mounting on contactor <input checked="" type="checkbox"/>
Example	3RB3 0 1 6 – 1 R B 0

Note:

The article number scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

Benefits

The most important features and benefits of the 3RB3 and 3RB2 electronic overload relays are listed in the overview table (see "General data", page 7/76 onwards).

Application

Industries

The 3RB3 and 3RB2 electronic overload relays are suitable for customers from all industries who want to guarantee optimum inverse-time delayed protection of their electrical loads (e.g. motors) under normal and heavy starting conditions (CLASS 5E to 30E), minimize project completion times, inventories and energy consumption, and optimize plant availability and maintenance management.

Application

The 3RB3 and 3RB2 electronic overload relays have been designed for the protection of three-phase motors in sinusoidal 50/60 Hz voltage networks. These relays are not suitable for the protection of single-phase AC or DC loads. The 3RU2 thermal overload relays are recommended for that purpose.

Ambient conditions

The devices are insensitive to external influences such as shocks, corrosive ambient conditions, aging and temperature fluctuations.

For the temperature range from -25 to +60 °C, the 3RB3 and 3RB2 electronic overload relays compensate the temperature in accordance with IEC 60947-4-1.

For the 3RB2 electronic overload relays with the sizes S6 and S10/S12, the upper set value of the setting range must be reduced for ambient temperatures > 50 °C by a certain factor.

Use of SIRIUS protection devices in conjunction with IE3 and IE4 motors

Note:

For the use of 3RB3 and 3RB2 electronic overload relays in conjunction with high-efficiency IE3 and IE4 motors, please observe the information on dimensioning and configuring, see [Application Manual](#).

For more information, [see page 1/8](#).

Overload relays

SIRIUS 3RB electronic overload relays IE3/IE4 ready

Selection and ordering data

3RB30 electronic overload relays, CLASS 10E

Features and technical specifications:

- Connection methods
 - Sizes S00 and S0
Main and auxiliary circuit: Either screw or spring-loaded terminals
 - Sizes S2 and S3
Main circuit: Screw terminals with box terminal or as straight-through transformer
Auxiliary circuit: Either screw or spring-loaded terminals
- Overload protection, phase failure protection and asymmetry protection
- Internal power supply

- Auxiliary contacts 1 NO + 1 NC
- Manual and Automatic RESET
- Switch position indicator
- TEST function and self-monitoring
- Sealable covers (optional accessory)

Overload relays

Accessories

Overview

Depending on the type of overload relay, an extensive range of accessories can be ordered as an option:

- Terminal supports for stand-alone installation
- Mechanical RESET
- Cable releases with holder for RESET to reset devices that are difficult to access

- Electrical Remote RESET module
- Sealable covers
- Terminal covers
- Box terminal blocks
- Tools for opening spring-loaded terminals
- Blank labels

Modules for Remote RESET, electrical								
	Operating range 0.85 ... 1.1 x U _s , power consumption 80 VA AC, 70 W DC, ON time 0.2 ... 4 s, switching frequency 60/h							
3RU1900-2A.71 mounted on the overload relay	• 24 ... 30 V AC/DC	S00 ... S3	3RU2	3RU1900-2AB71	1	1 unit	41F	
	• 110 ... 127 V AC/DC	S00 ... S3	3RU2	3RU1900-2AF71	1	1 unit	41F	
	• 220 ... 250 V AC/DC	S00 ... S3	3RU2	3RU1900-2AM71	1	1 unit	41F	
Sealable covers								
	For covering the setting knobs	S00 ... S3	3RU2	3RV2908-0P	100	10 units	41E	
3RV2908-0P								
	For covering the setting knobs	S00 ... S12	3RB3, 3RB2	3RB3984-0	1	1 unit	41F	
3RB3984-0								
Terminal covers								
	For complying with the phase clearances and as touch protection if box terminal is removed							
3RT1946-4EA1	Covers for cable lugs and busbar connections							
	• Length 100 mm	S3	3RU2, 3RB3	3RT1946-4EA1	1	1 unit	41B	
	• Length 100 mm	S6	3RB2	3RT1956-4EA1	1	1 unit	41B	
	• Length 120 mm	S10/S12	3RB2	3RT1966-4EA1	1	1 unit	41B	
	Covers for devices for box terminals							
3RT1956-4EA2	• Length 25 mm	S6	3RB2	3RT1956-4EA2	1	1 unit	41B	
	• Length 30 mm	S10/S12	3RB2	3RT1966-4EA2	1	1 unit	41B	
	Covers for devices for busbar connections							
3RT1966-4EA3	Between contactor and overload relay, without box terminals (1 unit required per combination)	S6	3RB2	3RT1956-4EA3	1	1 unit	41B	
		S10/S12	3RB2	3RT1966-4EA3	1	1 unit	41B	
	Covers for devices with screw terminals (box terminals)							
3RT2936-4EA2	Additional touch protection for fastening to the box terminals							
	• Main current level	S2	3RU2, 3RB3	3RT2936-4EA2	1	1 unit	41B	
		S3	3RU2, 3RB3	3RT2946-4EA2	1	1 unit	41B	
Box terminal blocks								
	For round and ribbon cables							
3RT1955-4G	• Up to 70 mm ²	S6 ¹⁾	3RB2	3RT1955-4G	1	1 unit	41B	
	• Up to 120 mm ²	S6	3RB2	3RT1956-4G	1	1 unit	41B	
	• Up to 240 mm ²	S10/S12	3RB2	3RT1966-4G	1	1 unit	41B	

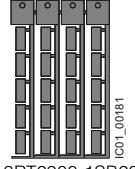

¹⁾ In the scope of supply for 3RT1054-1 contactors (55 kW).
